Note

This and other government publications may be purchased from local authorized agents and other community bookstores or by mail order.

Mail orders should be sent to Publications Distribution, Statistics Canada, Ottawa, K1A 0T6, or to Publishing Centre, Supply and Services Canada, Ottawa, K1A 0S9.

Inquiries about this publication should be addressed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0Z8 (telephone: 995 - 7406) or to a local Advisory Services office:

St. John's (Nfld.)	(726-0713)
Halifax	(426-5331)
Montréal	(283-5725)
Ottawa	(992-4734)
Toronto	(966-6586)
Winnipeg	(949-4020)
Regina	(359-5405)
Edmonton	(420-3027)
Vancouver	(666-3695)

Toll-free access to the regional statistical information service is provided in Nova Scotia, New Brunswick, and Prince Edward Island by telephoning 1-800-565-7192. Throughout Saskatchewan, the Regina office can be reached by dialing 1-800-667-3524, and throughout Alberta, the Edmonton office can be reached by dialing 1-800-222-6400.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index— $7.

This Index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory— $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Advisory Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
J.R. Podoluk — Director General, Content and Analysis Branch
J. Randall — Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, CANSIM Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
— Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

The Life Insurance Industry in Canada, 1961 to 1979

*Randall Geehan assisted by Patrick O'Hagan

This article presents a survey of the development of the Canadian life insurance industry during 1961 to 1979, the period for which Financial Flow Accounts data exist. Aggregate financial data are employed to analyse long term trends in the industry's sources and uses of funds, the industry's size relative to other major financial institutions and the growth of life insurance assets relative to personal saving. Before analysing the data, it is necessary to define the industry and explain the conventions of the Canadian System of National Accounts.

The life insurance industry consists of three major components; the life business of life insurance companies and fraternal benefit societies (Sector VII.I in the Financial Flow Accounts, $31.7 billion in total financial assets at the end of 1979), segregated funds[1] of life insurance companies (Sector VII.2, $5.4 billion in total financial assets at the end of 1979) and accident and sickness branches of life insurance companies (Sector VIII.6, $1.9 billion in total financial assets at the end of 1979). Separate data on these three industry components have only been available since 1978. For the period 1961 through 1977, all three components of the life insurance industry are combined in Sector VII.1 in the CANSIM data base. In order to improve comparability of the data over the full period 1961 to 1979, the Financial Flow Accounts data analysed in this paper are, unless specified otherwise, the combined figures for all three industry components. This combination to improve comparability does not eliminate the break in the series, however, because data for the latter period represent an improvement in terms of coverage, category detail and timeliness[2]

Life Insurance in the National Accounts

The gross inflows of funds from insurance premiums, annuity considerations (payments made to purchase annuities) and investment income less gross outflows of claims and operating expenses constitute the net internally generated source of funds or surplus of life insurance companies. A small proportion of this surplus is allocated to stockholders and much of this is in turn paid out as dividends. The surplus not allocated to shareholders is allocated to policyholders and constitutes a liability of the life insurance sector to persons, i.e., an asset claim of persons on the life insurance sector. In addition to these internally generated funds, money can be raised for the accumulation of assets by increasing liabilities, e.g., increased bank borrowing.

The internally generated surplus allocated to policyholders (in other words, the net source of funds provided by policyholders) is a use of personal saving under the conventions of the Canadian System of National Accounts (CSNA). It is not saving of the life insurance sector.

In the National Income and Expenditure Accounts of the CSNA, life companies and fraternal benefit societies are treated as "associations of individuals" with premiums and claims being treated largely as transfers or redistributions of funds within the personal sector. Only life insurance industry operating expenses and not the whole of premiums are treated as personal consumption expenditure. This "association of individuals" owns the net assets of the life insurance sector; the income earned on these assets is part of personal income and the accumulation of these assets net of liabilities constitutes a use of personal savings. The following identity will be used to clarify why it is necessary to state that the accumulation of life insurance assets on behalf of policyholders is a use and not a component of personal saving. "Sources equal uses" of funds is a fundamental identity for any sector including the persons and unincorporated business sector. Personal saving (S) plus capital consumption allowances (CCA) plus net borrowing or change in liabilities ($\triangle L$) are the three main classes of sources of funds, with the latter broken down into considerable detail in the Financial Flow Accounts. Investment in real assets ($\triangle RA$, broken down into gross fixed capital formation, value of physical change in inventories and net purchase of existing and intangible assets) and investment in

---

*Randall Geehan is Chief, Financial Flows Section, Financial Flows and Multinational Enterprises Division, Statistics Canada. Patrick O'Hagan is an economist in the Financial Flows Section

[1] Life insurance and annuity policies sold as variable contracts pay benefits which are not fixed but vary with the market value of a specified group of assets, called segregated funds, in which the premiums have been invested.

[2] See the article, "Life Insurance Data: A Restructuring with Improved Coverage and Category Detail", *Financial Flow Accounts*, Catalogue 13-002, third quarter 1979.

financial assets (△FA, again presented in considerable detail), are the uses of funds. Hence

$$S + CCA + \Delta L = \Delta RA + \Delta FA$$

from which it is clear that the accumulation of any particular financial asset cannot be described as a "component" of saving. As is obvious from the identity, the sum of the net accumulations of all types of assets (mislabelled "components" of saving) does not equal total saving.

The Financial Flow Accounts record financial transactions on a domestic basis, which is to say that transactions between two Canadian residents and between a resident and a non-resident are recorded, but not transactions between two non-residents. Consequently, the transactions of foreign branches of Canadian companies with non-residents are excluded from the Financial Flow Accounts and the rest of the CSNA as well. Foreign companies incorporated in Canada or operating branches in Canada are considered to be resident institutions and their transactions are treated just like those of Canadian companies.

Sources of Funds to the Life Insurance Industry

As noted above, the Financial Flow Accounts record three classes of sources of funds for any sector: saving, which for corporations is more commonly known as retained earnings; capital consumption allowances; net increase in liabilities. Net sales of any asset item are also a source of funds, but for present purposes it is useful to categorize sources and uses as above. For the life insurance industry, retained earnings (surplus allocated to shareholders net of dividends paid) and capital consumption allowances are relatively small and will be ignored in the analysis to follow. The major liability item and major source of funds to the industry is the surplus allocated to policyholders or liability Category 3430, life insurance and pensions, an asset of the personal sector, Category 2430. Other liabilities such as bank loans are relatively small and data are lacking for the period before 1978, so they will be ignored in the following analysis.

The Financial Flow Accounts present no breakdown of the net source of funds supplied by policyholders and the quarterly survey data provided by Business Finance Division of Statistics Canada also lack sufficient detail on this aspect of life insurance operations. Therefore in order to analyse Category 3430 (life insurance and pensions claims) it is necessary to obtain information from other sources. The annual reports of the Superintendent of Insurance for Canada contain data on federally registered companies, both Canadian and foreign, and federally registered fraternal benefit societies. Provincially registered companies and fraternal benefit societies are not covered in this source but these constitute less than 10% of the industry. The Canadian Life and Health Insurance Association (CLHIA) in its annual publication, *Canadian Life Insurance Facts* adds an estimate for the provincially incorporated companies to the superintendent's figures for federally registered companies but it excludes fraternal benefit societies which constitute about 1% of the total. The CLHIA is the data source for this section on sources of funds.

The major life insurance "products" (excluding accident and sickness insurance, a minor product line in terms of asset accumulation) from which the industry derives its funds are:

TEXT TABLE I — Major Life Insurance Products

Life Insurance

(1) Individual life policies
    (a) whole or permanent
    (b) term
(2) Group life (term)

Annuities

(3) Individual
(4) Group

Whole or permanent life insurance pays the face amount, also called the sum insured, on the death of the life insured or at the maturity of the policy. Payment at maturity, if this occurs before death, is made in the case of endowment insurance but most other types of whole life policies require premium payments until death. Term insurance is written for a fixed period of time and only pays the face amount if death occurs within that period, otherwise no sum is returned to the policyholder. Other things being equal (age, risk class, face amount) the premiums on permanent insurance are higher than on term because permanent insurance accumulates a fraction of the premiums paid as "cash surrender value" which will be paid upon voluntary termination of the contract by the policyholder before death or maturity. Furthermore, the policyholder can borrow money from the company against this cash value. Group life insurance is issued to a group of individuals, usually employees, under one master contract, usually issued to an employer. An annuity is a contract that provides regular income payments for a specified period or for the life of the annuitant. Group annuities provide annuities at retirement to a group of people (usually employees of the employer to whom the master contract is issued) in a pension plan.

Data available from the CLHIA and the annual reports of the superintendent of insurance show the gross premiums and annuity considerations received for each of the four product types and the amounts of insurance in force and amounts of insurance effected (gross sales) for 1a, 1b and 2 in Text Table I. Gross premium and annuity cash inflows do not directly reveal the net amounts provided as a source of funds available for investment on behalf of policyholders. Operating expenses (including sales commissions and taxes), claims and annuity benefits must be subtracted from gross premium and annuity considerations while investment income on existing assets must be added before arriving at the net source of funds for investment. The available data do not permit accurate calculation of the net source of funds provided by each product line. In particular, operating costs are not allocated by product line and no split of premiums and claims is available for (1a) individual whole life versus (1b) individual term insurance.

Nevertheless, it is possible to characterise some of the products listed in Text Table I in terms of the relative magnitude of the ratio of net to gross receipts. Individual whole life insurance and both individual and group annuities provide a larger fraction of net funds for the accumulation of financial assets than do individual term and group insurance. The premiums paid on the latter two are largely used to cover current operating expenses and claims, and therefore contribute relatively little to the claims of policyholders (Category 3430) on life insurance companies.

As Figure I shows, the proportion of total gross premium plus annuity income which comes from individual life policies (whole life plus term) has fallen substantially over the period 1962 to 1979, while the proportion from individual annuities has grown substantially. The remaining two product lines have both grown by small amounts in proportional terms. Accident and sickness insurance, a minor product line showing relatively low growth, is excluded from these calculations. Figure II shows these same gross flows in dollar terms, rather than proportional terms as in Figure I

Since the change in product mix is dominated by the decline of individual insurance, a product characterized by a relatively high ratio of net to gross receipts, this has contributed to a slowing down in growth of life insurance industry assets relative to other financial institutions. Figures I and II do not reveal the whole story. Figure III uses data on gross additions to amounts of life insurance in force (face amounts, not annual premiums) to reveal that a shift away from whole life to term insurance has contributed to the declining proportion of individual life insurance measured in terms of gross premiums and to the slowing down in growth of life insurance industry assets relative to other financial institutions. Figure IV shows more clearly that group insurance in force has been growing faster than individual term insurance.[3] One might expect that group insurance is a substitute for individual insurance, both permanent and term.

One development favourable to the industry is manifested in the growth of individual annuity considerations. The introduction of Registered Retirement Savings Plans (RRSPs) in 1957 and the subsequent raising of the limits on maximum tax deductible contributions in 1972 and 1976 greatly encouraged the growth of individual annuities. Whole life policies can also be registered but it is not always advantageous to the policyholder to do so.

Uses of Funds by the Life Insurance Industry

Financial institutions generally attempt to match the term structure of their assets to the term structure of their liabilities in order to reduce a variety of intermediation risks. For example, if assets have a shorter term than liabilities there is the risk that the funds yielded by the asset at maturity could not be re-invested at the same yield, making it risky to promise a given yield to the original long-term lenders. Or, if assets have a longer term than liabilities, as the liabilities mature and are repaid, the longer term assets may lack liquidity or may have fallen in capital value as a result of a rise in market yields. The liabilities of life insurance companies are long (but not fixed) term and are matched with long-term assets, mainly mortgages, bonds and, in a much smaller proportion, stocks. It is worth noting that real estate is of growing importance as an asset, but remains a relatively small portion of total assets.

Figure V shows the decline in the proportion of assets held in the form of bonds from nearly 50% of total assets at the end of 1961 to less than 40% at the end of 1979. Canadian corporation stocks grew from 3% to 9% over the period while the proportion of mortgages increased until the end of 1966, levelled off, then fell during the seventies. Figure VI shows the changing mix of Canada, provincial, municipal and other (mainly corporate) bonds. The proportion of total bonds held as corporate bonds, the largest component, has fallen in recent years, following a long period of gradual increase whereas Canada bonds, the smallest component in most years, manifest a pattern which is almost the mirror image. The proportion of provincial bonds has remained remarkably constant and municipal bonds have declined steadily in importance.

Government regulations limit the types and proportions of assets that life insurance companies can hold by restricting bond and stock investments to issuing companies satisfying stipulated conditions of financial strength and also by restricting the value of a mortgage as a proportion of the property value securing it. Restrictions on the proportion of total assets that may be held in various forms are, potentially, more relevant to this analysis. In 1965 the permitted amount invested in common stocks was raised to 25% (from 15%) of the book value of total assets. Clearly, this was not a binding constraint for the industry as a whole during the period under study; furthermore, there were no constraints on the proportion of funds invested in mortgages and bonds. One must look for factors other than regulatory changes for an explanation of the change in the industry asset portfolio.

The rapid growth of stocks relative to other assets resulted from the rapid growth of segregated funds (see footnote 1 for a definition), first permitted under legislation in 1961. Figure VII shows the growth of these funds relative to total financial assets of the industry. At the end of 1979 segregated funds' assets were $5,532 million (of which shares in Canadian corporations were $1,616 million or 29%) out of total industry assets of $39,060 million.

The changes in asset mix displayed in Figures V and VI reveal only part of the story of life insurance industry asset growth. Figure VIII sheds more light by revealing the extraordinary decline in importance of the life insurance industry in the mortgage market as its holdings fell during the 1961 to 1979 period from 29%

---

[3] The provision of more group insurance under existing benefit scales to a worker receiving more pay is not classified as a new purchase; therefore the increase in group insurance outstanding (Figure IV) exceeds the sales shown in Figure III

of total mortgages outstanding to less than 12%. A lesser decline is evidenced for bonds, while the industry's share of total stock assets grew.

The life industry's investments in mortgages grew in dollar terms during this period but fell far behind the rapid pace of growth in total amount outstanding. The fast growth of credit unions and trust and mortgage loan companies, the latter two highly specialized in mortgage investment, plus increased mortgage lending by banks following the 1967 Bank Act revisions,[4] all contributed to the declining relative importance of life companies in the mortgage market. The nature of mortgages as financial instruments has changed during this period because previous to 1969, NHA mortgages always had terms equal to their amortization period, usually 25 years, but after 1969, regulations were revised and it became more common for residential mortgages to be issued for a term of (typically) five years, at which time the loan rate could be re-negotiated for the next five years of the amortization period. This change made mortgages more of an intermediate term asset, somewhat less desirable as a match for the long term liabilities of life insurance companies but well suited to trust and mortgage loan companies which can match five-year guaranteed investment certificates to five-year term mortgages. Life insurance companies, as a result, reduced the proportion of their portfolios in mortgages and shifted their mortgage portfolios away from single family residential mortgages which typically have a five-year term to mortgages on rental property and commercial property which generally have longer terms.[5]

The proportion of total bonds outstanding held by the life insurance industry has declined slightly from about 11% to about 8% over the 1961 to 1979 period, as shown in Figure VIII. This decline is to be expected, given the decline in total life insurance industry assets relative to other financial institutions and given the switch in the industry's asset mix in favour of stocks. The more detailed information in Figure IX shows that the downward trend is shared by all four types of bonds during most of the period, but with corporate bonds and Canada bonds recovering in later years from their low points.

Growth of the Life Insurance Industry

Measured in terms of total financial assets, the life insurance industry grew by 360% from the end of 1961 ($8,492 million) to the end of 1979 ($39,060 million) while chartered banks grew by 1,131% (from $14,101 million to $173,597 million), near-banks grew by 1,588% (from $4,409 million to $74,440 million). This decline in the relative size of the life insurance industry in Canada is not a recent phenomenon. According the E.P. Neufeld, the industry has been declining relative to other financial institutions since 1940.[6]

Additional evidence of this relative decline, from another viewpoint, is provided by the annual financial flows data for the persons and unincorporated business sector. The ratio of the flow of claims by persons on the life insurance industry to net personal saving declined from about 40% in 1961 to about 20% in 1979. Figure X displays this trend and the similar decline in the ratio of the flow of increased life insurance assets to the total flow of financial assets for the persons and unincorporated business sector.

The evidence of decline is clear. What are the reasons for it? While conclusive answers cannot be given, a number of factors have likely contributed to the relative decline. First, a number of (approximate) substitutes have appeared in recent years, replacing life insurance to some extent in the financial planning of many families. Second, there have been a number of demographic and social changes unfavourable to the industry's growth. Third, the effects of inflation have been severely detrimental.

Life insurance has two major functions to perform: it helps to compensate for the financial loss to dependents resulting from the death of the insured; and both whole life insurance and annuities provide financial resources for an uncertain period of retirement. Public and private pension plans perform these functions, particularly the latter, and both types of plans have grown substantially in recent years. The growth of the Canada and Quebec Pension Plans, which began in 1966, is recorded in Sector XII of the Financial Flow Accounts and the growth of trusteed pension plans is recorded in Sector VII.3. Life companies have shared in the growth of employer sponsored pension plans and this growth is reflected particularly in Sector VII.2, segregated funds.

Tax incentives have promoted rapid growth of Registered Retirement Savings Plans which in turn has both helped and hurt the life insurance industry. As noted above, the industry has benefited from sales of whole life and annuity contracts registered as RRSPs but because the industry has no monopoly on RRSPs it loses considerable business to trust companies, banks and individually managed plans.

All types of pensions and retirement savings plans are more closely substitutable for whole life insurance and annuities than they are for "pure" or term life and therefore their growth explains the shift from whole life to term better than their growth explains the relative decline in total individual insurance. On the other hand, the growth in employer sponsored group insurance has quite clearly substituted for individual insurance. As noted previously, substitution of "pure" insurance (individual term or group insurance) for whole life reduces the growth of life industry assets.

---

[4] Previous to these revisions, the chartered banks could not make loans at rates above 6%, which made CMHC insured mortgage loans (the only kind they were permitted to hold) unprofitable whenever market rates exceeded this, as was often the case in latter years. After the 1967 revisions the interest rate ceiling was removed and the banks were permitted to make conventional mortgage loans as well as CMHC insured (NHA) loans.

[5] See Chapter 12, James E. Hatch, *The Canadian Mortgage Market* (Toronto: Queen's Printer for Ontario, 1975).

[6] E.P. Neufeld. *The Financial System of Canada*, Toronto, MacMillan, 1972, p. 254.

Demographic and social factors such as the trends to two income families and to fewer children have likely contributed to the industry's relative decline. It may be that families with two income earners feel themselves to be partly self-insured. Each spouse is able to provide for his or her own financial well-being in the event of the other's death, reducing the family's insurance needs. The trend during the sixties and seventies to families with fewer children has likely reduced the other part of the average family's insurance needs. One might also speculate on the effect of the increase in marital breakdown and the rise of single person households.

Finally, one must consider the effects of one of the most important economic changes of the sixties and seventies, namely substantial fluctuations in the rate of inflation superimposed on a rising trend, together with the effect of inflation on interest rates. It might be expected that a high but steady rate of inflation would encourage policyholders to buy more insurance in order to maintain their real level of insurance protection, but if there are unexpected changes in inflation rates, as was the case during this period, the effect on insurance demand may be quite different. The parallel rise in inflation and interest rates has had severe effects on the value of long-term assets. Individuals have been dismayed by the low prospective yields on life insurance products resulting from the predominance of older, low yield instruments in the asset protfolio and the increasingly obvious erosion of the purchasing power of the maturing value of the instrument (e.g., at 10% annual inflation, a $10,000 policy would pay at the end of 40 years only about $221, measured in terms of beginning-of-period purchasing power). The industry has attempted to offer more inflation resistant instruments, chiefly segregated funds which are heavily invested in stocks; but stock market returns have failed to compensate for inflation during most of this period. In any event, new products have not reversed the tide.

Rising interest rates have had, from the industry's viewpoint, another unwelcome effect. Since holders of policies issued prior to recent years have the right to borrow up to the cash value of their permanent life insurance policies at a fixed interest rate specified in their contract, any rise in general rates above this specified rate provides an incentive for policyholders to borrow either as a substitute for bank borrowing or as a means of earning arbitrage profits via investments in higher yielding short-term instruments such as term deposits. The latter process is a type of disintermediation. On policies written before September 1968, the maximum rate specified on policy loans was 6% and the maximum rate specified in new contracts after 1968 changed only slowly, often lagging behind the rapid rises in short-term rates witnessed during the seventies. More recently, rates are often specified to vary with market rates.

The effect of disintermediation has been more pronounced in the United States where at the end of 1979 policy loans outstanding constituted 8.3% of total financial assets, whereas in Canada the corresponding figure is 4.2%. In the Financial Flow Accounts, policy loans are recorded under Category 2321, consumer credit, and the level stood at $1,657 million at the end of 1979. While the level is not high relative to total assets, quarterly flows have fluctuated widely. The magnitude of these flows is not under life companies' control but the flows are a relatively stable function of interest rates. Figure XI reveals a fairly strong relation between short-term interest rates and the flow of policy loans. Even relatively simple econometric models can be used to produce serviceable relationships for forecasting these flows. For example, the following equation is fitted to quarterly data for the period from the first quarter of 1962 to the fourth quarter of 1979. The dependent variable FPL is the quarterly flow of policy loans as reported in the Financial Flow Accounts (Category 2321, Sector VII.1) and ARPL is the difference between the chartered banks' rate on prime business loans and 6% which is the borrowing rate on policy loans for the bulk of policies during this period; so this variable measures the incentive for disintermediation or interest rate arbitrage and the expected sign of its coefficient is positive. The standard errors are reported in parentheses below the estimated coefficients. The equation is corrected for first order autocorrelation of the error term.

$$\begin{array}{llll} \mathrm{FPL} & = & 4.16 + 7.44\ \mathrm{ARPL} & R^2 = 0.63 \\ & & (2.02)\ \ (0.68) & \end{array}$$

This same equation was used to "forecast" dynamically (i.e., using the previous observed value of the dependent variable) the flow of policy loans for the first three quarters in 1980. Taking into consideration the volatility of flows during the forecast period and consequently the extreme difficulty of making forecasts, the results as shown in Figure XII are reasonably good.

Equations with more dependent variables were also estimated but the theoretical basis for their inclusion and their ability to provide an independent additional contribution to "explaining" movements of the dependent variable, were inferior. Examples of these variables, suggested by similar studies using American data, include the following: total consumer credit outstanding, the rate of inflation, total policy reserves and the ratio of policy loans to reserves.

Conclusion

The life insurance industry has faced severe challenges to its growth from two basic sources, competition from other institutions and inflation. Neither challenge is likely to recede in the future. A reversal of the past trend of relative decline in the industry's growth is unlikely, but it is probably safe to predict that new products as well as new marketing techniques will be introduced in the search for growth. The industry is likely entering a period of the most rapid change in its recent history. ■

Observations

Despite what conventional wisdom regarding our consumer-oriented society might lead us to believe, not everyone is motivated to work only for profit: people are still willing to volunteer their services without monetary reward. A recent national survey by Statistics Canada (described in this article) revealed a substantial 15.2% of the working-age population, or approximately 2.7 million persons, did some unpaid volunteer work during the reference year (February 1979 to February 1980). A further 3% had considered doing volunteer work during this period.

The traditional idea of a volunteer worker has been that of the bored middle-aged upper-income housewife with a zealous desire to "do good". The findings of this survey and others (e.g. Carter, 1975) indicate the fallacy of this notion and suggest instead that volunteers are drawn from a variety of backgrounds. Apparently, then, either the characteristics of voluntary workers and their services have been changing (as proposed in an article in the December 8 edition of *Maclean's*) or, alternatively, the traditional views of volunteers have perhaps never been accurate.

A brief overview of the data from the Statistics Canada survey reveals first that almost as many men as women volunteer. The voluntary work participation rates of men and women, i.e. the proportion of the respective working-age population aged 15 years and over who did volunteer work in the reference year, were 14.2% and 16.2% respectively. The data also show that some of the highest volunteer work participation rates were found among individuals aged 25 to 44, married persons, the well-educated, and employed persons. And given their high participation rates, these groups accounted for higher proportions of the volunteer group than would have been expected from their distributions in the working-age population. To illustrate, the volunteer work participation rate of persons aged 25 to 44 is relatively high (19.8% compared to 15.2% for the entire population) with the result that while persons aged 25 to 44 compose 37.5% of the working-age population, they represent 48.6% of the volunteers.

How much volunteer work do Canadians perform? The survey found that volunteer workers in Canada gave 374 million hours in total during the reference year. (The significance of this magnitude can be appreciated by noting that it is the equivalent in terms of paid employment to about 212,000 persons working a 40-hour week for a full year.) On average, volunteers spent 137.4 hours on volunteer activity over the year, or roughly three hours per week. Among the persons who individually allocated the *most time* on average were those aged 45 years and over, persons with university degrees, and persons not in the labour force.

The survey results also indicate that volunteer workers engaged in a broad range of activities and services. The organizations most frequently participated in were social/welfare, religious, and leisure activity associations. Political organizations, however, captured only 4.4% of the volunteer population despite the fact that the reference year included a federal election as well as four provincial elections.

The kinds of services provided by volunteers in Canada were primarily of an administrative nature ("managerial/clerical services" and "committee work" together captured 39.6% of the volunteers); however, social/welfare services also represented a sizeable proportion (20.3%). Although these findings are perhaps not startling, the data do suggest an interesting result: that at least for some people, volunteer work is providing an opportunity for learning new skills or exercising skills for which their paid employment does not afford an outlet. To give just one example, among volunteers who were also employed in primary occupations (i.e. farming, fishing, forestry and mining) in the reference year, approximately one-quarter of them were involved in administrative committee work, while another 22% provided services of a managerial/clerical nature and 19% did social welfare work.

One final observation about the data: a substantial proportion (about one-half) of the volunteer group were found to be non-participants in the reference week, primarily for reasons relating to a lack of demand for services of volunteers on the part of the volunteer agency, as opposed to personal reasons such as illness or disability of the volunteer, personal or family responsibilities, etc. Therefore, this would suggest that, contrary to what some administrators in the field may believe, there may be an excess supply of some kinds of volunteers at any given point in time.

To conclude, although the primary intention of this article has been to alert readers to the existence and scope of the new survey data, it is hoped that it has also provided at least a rudimentary picture of volunteer workers in Canada. A more comprehensive analysis is found in *Labour Force Survey Research Paper No. 26*, available in mid-June, 1981. ■

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators For breakdown refer to CANSIM main base [3] Includes logging, fishing, trapping and hunting [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiancés and fiancées are included with spouses.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Real Domestic Product by Industry of Origin, Quarterly
27 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

Year and quarter	Wages, salaries, and supplementary labour income	Military pay and allowances	Corporation profits before taxes[1]	Deduct dividends paid to non-residents[2]	Interest & misc. investment income[3]	Accr'd net income of farm operators from farm prod.[4]	Net income of non-farm un-incorp. business incl. rent[5]	Inventory valuation adjust.[6]	Net national income at factor cost	Indirect taxes less subsidies	Capital consump allowances & misc val. adj	Residual error of estimate	GNP at market prices	GNP at market prices excl. accrued net income of farm operators

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population in that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, full-time members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

---

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

---

[1] These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1974. [2] With the introduction of 1974 weighting pattern in October 1978, city indexes were revised from January 1971 onwards. The revision was largely the result of making the procedures used in the compilation of city indexes conform to those of the Canada indexes.

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included

Note: All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

[1] Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)/concluded

Annual average and month	Furniture and fixtures	Paper & allied industries	Printing publishing & allied industries	Primary metal	Metal fabricating (ex. machy. & transp. equip.)	Machinery	Trans-portation equipment	Electrical products	Non-metallic mineral products	Petroleum and coal products	Chemical & chemical products	Misc mfgrg

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc

[2] Includes crude oil, condensate and pentanes plus.

[3] Gross new production by field less field flared and waste

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes [6] Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown.

Note: Components may not add to totals due to rounding and partial revisions

[1] Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2] Includes loans on the security of household property. [3] Not available on a monthly basis. [4] Includes loans to finance companies which are affiliates of retail merchandisers. [5] Religious, educational, health and welfare institutions. [6] Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage.

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available.

---

[2] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [3] Beginning in December 1973, this category includes oil export tax. [1] March includes supplementary payments arising from the closing of the accounts.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.
This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60. This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.
This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the X-11-ARIMA method developed at Statistics Canada. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Advisory Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
J.R. Podoluk — Director General, Content and Analysis Branch
J. Randall — Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, CANSIM Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
— Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, including a free annotated catalogue of current publications, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplemment.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Observations

Automation of Reference Maps

For the first time, Statistics Canada is producing a series of reference maps with the aid of the computer. This set of 37 maps covering the whole of Canada uses the boundaries of census subdivisions or municipalities stored in digital form in the 1981 Census Geographic Master File prepared by the Geography Staff of the Social Statistics Field. The computer programs, the compilation of all the maps and the production of some of them will be done by the Geocartographics Subdivision of the Special EDP Services Division while most of the maps will be produced by Geography Staff.

These maps will be published in the Standard Geographical Classification Manual in January 1982, in a 1981 Census of Population bulletin in the spring of 1982, and in conjunction with the Census of Agriculture data in the fall of 1982.

The production of these maps combines automated and manual mapping techniques. Some of these maps will be produced largely by computer by integrating three digital files:

(a) The file of municipal (or census subdivision) boundaries obtained by digitizing the boundaries of the municipalities and the Indian Reserves on the basis of the Energy, Mines and Resources 1:50,000 and 1:250,000 scale base maps. The municipal boundaries are in turn obtained from each province and updated as of January 1st, 1981.

(b) The file of names and standard geographic codes.

(c) The file of waterways and shorelines. The latter is obtained by digitizing the Energy, Mines and Resources 1:2,000,000 scale base maps.

The first two files are components of the 1981 Census Geographic Master File. The third was developed strictly for this project.

By superimposing the boundary file on the hydrographic file, the overlapping lines can be removed on a cathode screen so that when a municipal boundary protrudes into a waterway, it is erased so that only the shoreline shows.

The names from the census subdivision file are then placed at the centroid of each municipality using the geographic code appearing in both locations. If names become too crowded, they are repositioned using the cathode screen until they are satisfactorily spaced.

Most of the maps in the series will be produced by a less automated method. The municipal boundaries and waterways will be drawn by computer from the above described files. The unnecessary lines will be eliminated manually rather than via the cathode screen, while the names will be positioned manually, using a computer-produced list and a computer-prepared sketch.

The above described series of maps represents several innovations from the conceptual standpoint as well as from the methodological standpoint. Reference maps have existed for several censuses but the three users (Census of Population, Census of Agriculture, and Standards Division) have combined their efforts for this product.

A set of overlays will permit the various customer requirements to be met, while the layout of the maps will be improved over those of the past.

The maps will be produced in three colours: red for the boundaries of the 266 census divisions or counties, blue for the waterways and shorelines, and black for the boundaries, names and standard geographic codes of the 5,710 census subdivisions used for the capture and dissemination of 1981 Census data. The scales will be enlarged to increase legibility, and hydrographic details not essential to location will be eliminated, as will certain symbols that would unduly clutter the maps. The coverage of most of the maps will be modified to correspond insofar as possible to a region.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiancés and fiancées are included with spouses.

[1] Excludes profits (net of losses) of government business enterprises [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1 1) [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

---

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

---

[1] These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1974. [2] With the introduction of 1974 weighting pattern in October 1978, city indexes were revised from January 1971 onwards. The revision was largely the result of making the procedures used in the compilation of city indexes conform to those of the Canada indexes.

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note. All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

[1] Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Inventories owned							Inventories held: raw materials						
	Consumer goods							Consumer goods						
	Non-durable	Durable	Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Non-durable	Durable	Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export based industries	Supplementary classification: automotive products

[1] Starting with January 1968, production is manufacturers' production, prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

---

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Source: Housing Starts and Completions (64-002), Statistics Canada.

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown.

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage.

Sources: Air Carrier Operations in Canada (51-002), Statistics Canada, Air Carrier Financial Statements (51-206), Statistics Canada, Aviation Statistics Centre Service Bulletin (51-004), Statistics Canada.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available

---

[1] Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. [2] Total new settled-for ordinary sales in Canada. Total sales figure does not include sales for Northwest Territories. [4] Under new or amended contracts.

---

[2] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [3] Beginning in December 1973, this category includes oil export tax. [1] March includes supplementary payments arising from the closing of the accounts.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index— $7.

This Index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory— $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:
G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
— Director General, Content and Analysis Branch
— Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
Editor-Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Gross National Product

Second Quarter 1981 Advance Information

Preliminary estimates* of the National Income and Expenditure Accounts indicate that Gross National Product, seasonally adjusted at annual rates, rose to a level of $324.1 billion in the second quarter, an increase of 2.9%. In volume terms, GNP advanced 1.3% after a 1.0% gain in the first quarter. The average level in the first six months of 1981 is 3.1% above the average level for 1980. Most of the surprising second quarter gain in GNP occured early in the second quarter, as there were indications that domestic activity, notably household spending, had begun to slow substantially by the end of the quarter.

The second quarter advance in GNP was the result of a widespread strengthening of final demand. Investment in business residential construction and plant and equipment sustained their rapid gains of the first quarter, rising 7.0% and 2.5% respectively in volume. Consumer outlays also advanced about 0.6%, although there was a noticeable narrowing of the sources of strength. Real merchandise exports recouped all of their first quarter decline. A deterioration in the terms of trade, strong domestic demand for imports and a substantial worsening of the service account deficit pushed the nominal current account deficit to a record level in the second quarter.

Spending on total gross fixed capital formation gained 3.1% in volume, raising the share of fixed investment in GNP to 23.9%, only slightly below the historical record shares. Residential construction continued to rise by over 6%, as housing starts and work-put-in-place did not begin to retrench in the face of record mortgage rates until the end of the quarter. The strength of housing activity in Canada thus far in 1981 is the opposite of the American experience and is partly a response to the severe slump in residential construction in Canada from 1976 to mid-1980. Demand for mortgage money in Canada has also been relatively insensitive to higher financing costs as many home-buyers took out five-year mortgage loans in 1976 at the relatively low rates in effect at that time. Most of these home-owners have apparently been able to renew their mortgages at the substantially higher rates without slowing outlays for goods and services, partly because personal incomes have strengthened sufficiently.

Business investment in plant and equipment demonstrated a resilience similar to that recorded for residential construction. Nominal outlays in the second quarter were about 20.7% above the level of a year earlier, substantially in accord with the mid-year results of the Private and Public Investment in Canada survey. The volume increase this quarter was 2.5%, with much of the strength attributable to engineering construction and purchases of machinery and equipment.

Personal expenditure on goods and services rose 0.6% in real terms, as consumer demand has completed its strongest four quarters of growth since 1976. Both wages and salaries and personal incomes have strengthened relative to the personal expenditure deflator since mid-1980, following two years of very moderate growth. Employment gains account for much of this increase, and helped to reduce the June unemployment rate to the lowest level since 1976. An upturn in average earnings has also helped to boost labour income. In the second quarter consumers sharply increased purchases of non-automotive durable goods, by 2.7%, to more than offset widespread weakness in demand for cars and most semi-durable and non-durable goods. The less diffuse strength of personal expenditure partly reflected an advancing of outlays for furniture and appliances to take advantage of sales promotions in Ontario prior to the return of the sales tax on these items.

The nominal deficit in trade in goods and services deteriorated by $4.2 billion in the second quarter, as the current account balance has plummetted from a small surplus late in 1980 to a record quarterly deficit. Most of the decline in the second quarter reflected a deterioration in the terms of trade, as real net exports of goods and services fell by a more modest $392 million. Imports of motor vehicle products and gold strengthened, while sharply higher imports of crude petroleum and rolling mill products reflected concerns over domestic supply disruptions. Merchandise exports rose 7.1% in volume, although prices received for these goods slumped by 2.3%, partly because shipments of crude petroleum fell sharply. Export gains were most evident for motor vehicle products and wheat. Shipments abroad of forestry and mining products also recorded small but surprising gains in spite of weak commodity prices.

---

*The disruption of mail service during the summer impeded the normal survey-taking process. Telephone surveys of larger companies were substituted in many cases, and it is possible that current estimates will be subject to larger than normal revisions

Total inventory accumulation was $1.1 billion in volume in the second quarter. Non-farm business inventories rose at the same $1 billion rate recorded in the revised estimates for the first quarter. (Most of the revision in non-farm business inventories in the first quarter reflected the inclusion of the transfer of uranium inventories from the government sector to the business sector. While this transfer changed the sectoral distribution of inventories, there was no net effect on the economy-wide stock estimates.) Excluding the effect of the uranium transfer, there was a small increase in the rate of stockbuilding in the non-farm business inventories, reflecting large increases in durable goods held in the manufacturing and retail industries, particularly for motor vehicles.

Wages, salaries, and supplementary labour income grew 3.5% in the second quarter, a continuation of the strengthening of labour income that began late in 1980. Goods-producing industries such as manufacturing and mining led this increase, as industrial output rose a further 2.2%. Higher income tax collections helped to slow the gain in personal disposable income in the quarter to 2.7%. With personal expenditure expanding by 3.2%, the personal savings rate dipped to 9.6%.

Corporate profits before taxes declined about 1.8%; profit growth has been sluggish since late 1979. While the volume of demand rose strongly in the second quarter, an easing of final demand price increases served to restrain profits. This was most evident in the 2.3% decline in prices received for merchandise exports, and a flattening out of inventory profit valuations.

Total government revenue, excluding intergovernmental transfers, increased by 4.5% in the quarter, reflecting higher personal income tax collections and continued strength in petroleum-related revenues. Total government expenditure rose by 5.1%, an acceleration from the rate of the previous quarter. Spending strength occured in petroleum-related subsidies, transfer payments to persons and expenditure on goods and services. With expenditures outpacing revenue growth, the first quarter surplus of $360 million swung to a $484 million deficit in the second quarter. ■

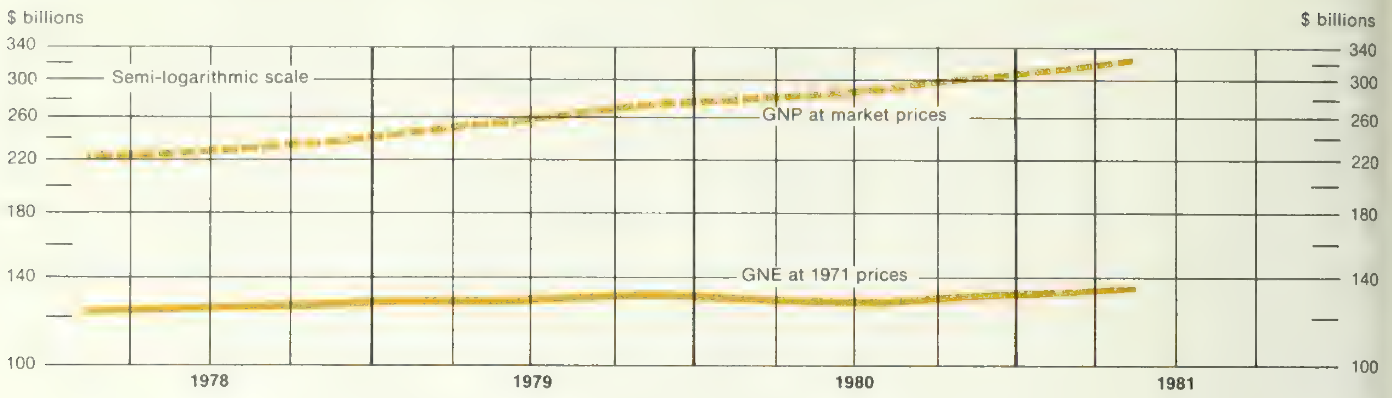
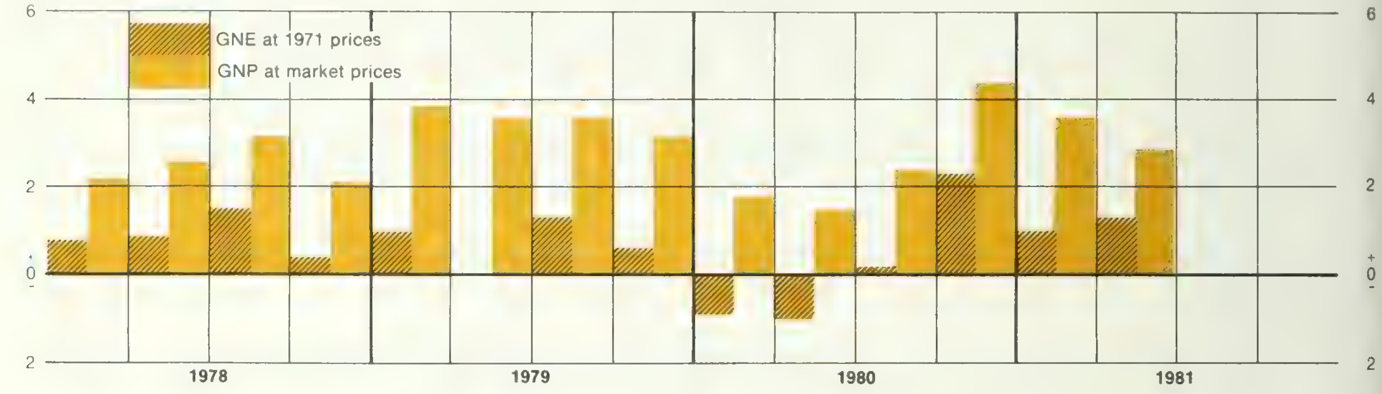
In the second quarter of 1981, Gross National Product, seasonally adjusted at annual rates rose to a level of $324.1 billion, an increase of 2.9%. In volume terms, GNP advanced 1.3%.

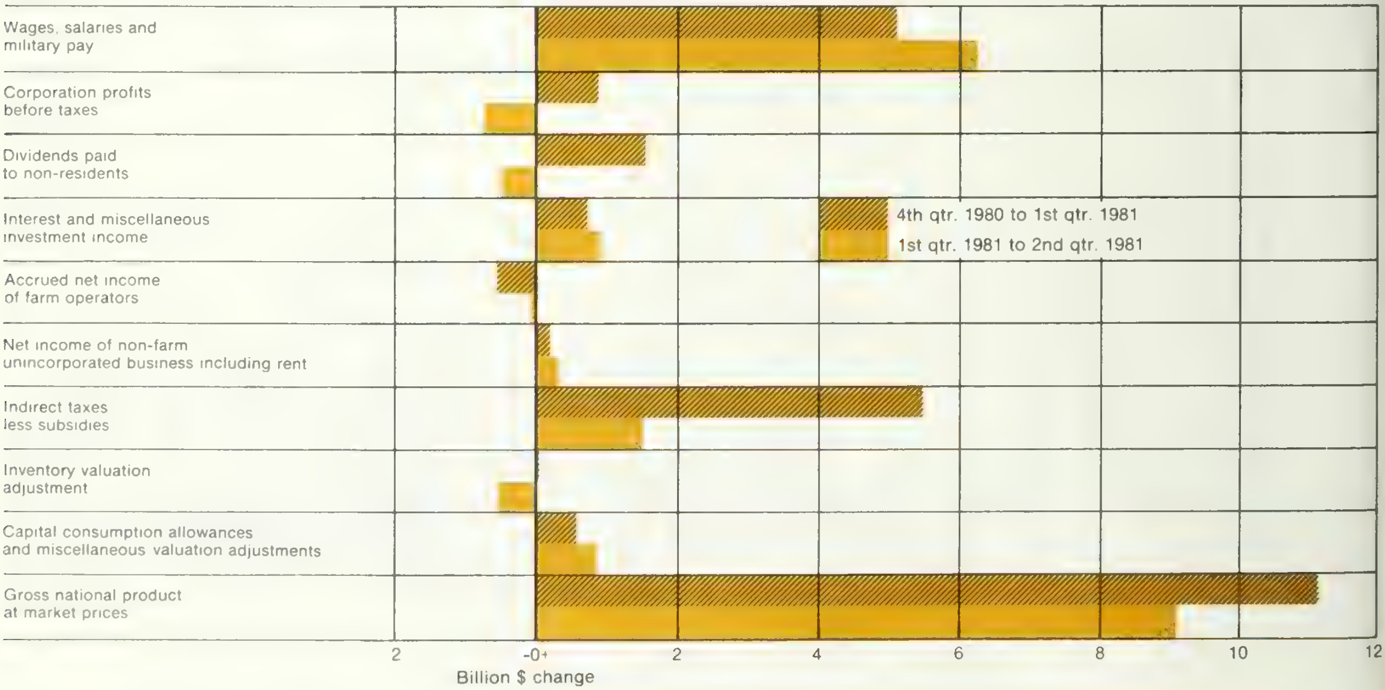


Quarter-to-Quarter Change



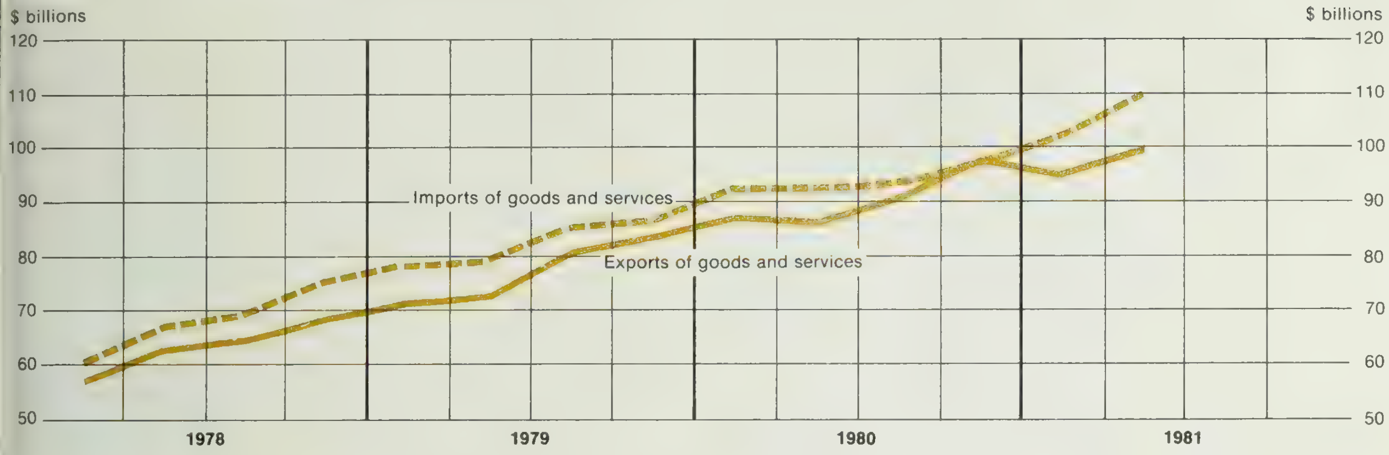
Wages, Salaries and supplementary labour income and military pay grew 3.6% in the second quarter, a continuation of the strengthening of labour income that began in late 1980. Corporation profits before taxes declined 1.8% while interest and miscellaneous investment income rose 4.1%.

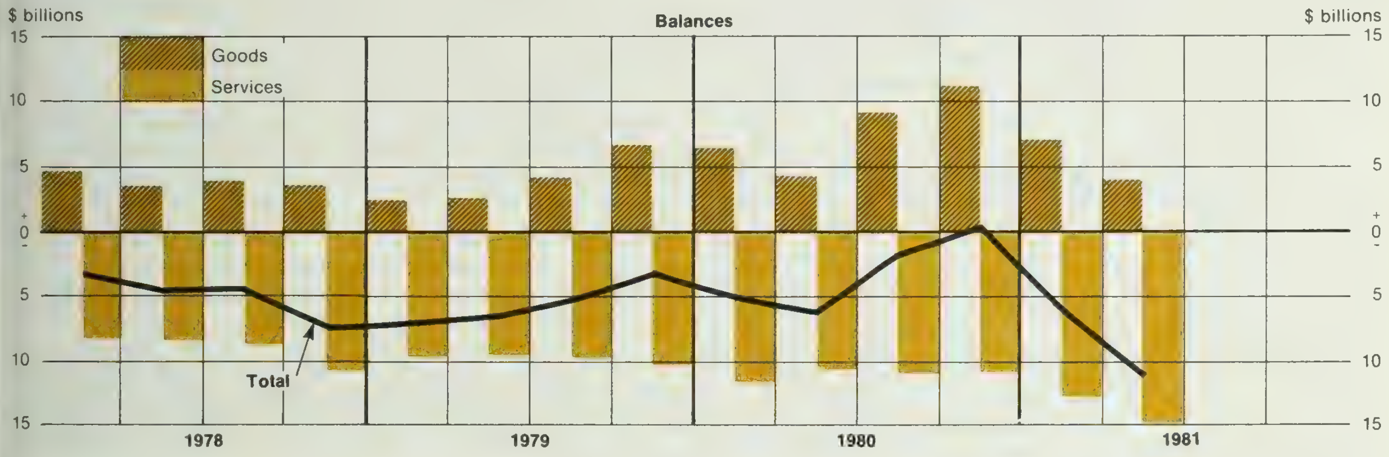
Quarterly changes in GNP and components



Note: All quarterly data adjusted for seasonal variation and at annual rates

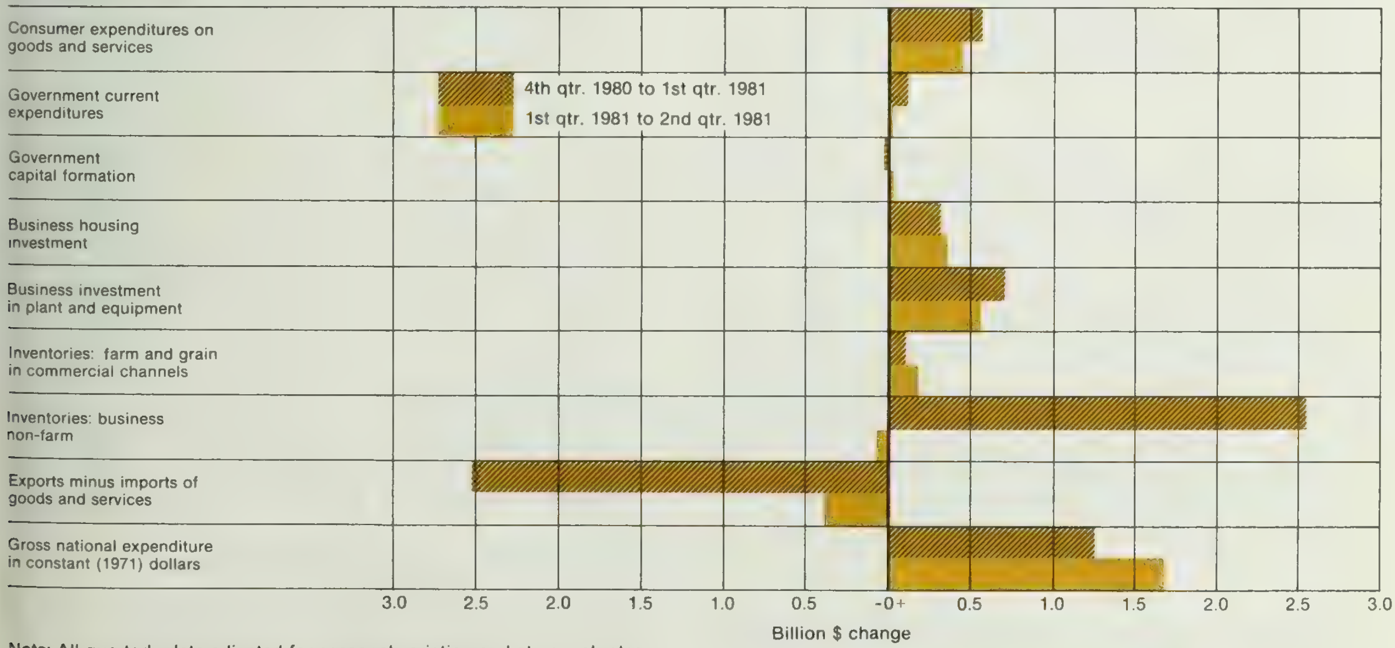
Exports and imports of goods and services increased 4.2% and 8.1% respectively. The balance of trade in goods and services deteriorated by $4.2 billion to a record quarterly deficit of $10.9 billion.





The improvement in real GNE in the second quarter resulted mainly from increases in consumer expenditure on goods and services and business investment in housing and in plant and equipment.

Quarterly changes in GNE and components in constant (1971) dollars



Note: All quarterly data adjusted for seasonal variation and at annual rates.

Financial Activity in Canada
An Overview

In the first quarter of 1981, non-financial sectors of the Canadian economy raised $17,875 million on conventional credit markets, compared with $13,361 million in the same quarter the year earlier. These funds amounted to 24.1% of the final value of goods and services produced in the period, up from 20.3% in the first three months of 1980.

Non-financial private corporations accounted for 49% of the funds so raised, up from 40% in the equivalent period in 1980. General government (i.e., federal, provincial and municipal governments — Sectors X and XI) accounted for 12%, under half the proportion of 27% in the first three months of 1980. The chartered banks registered the most significant change in providing funds to conventional credit markets, increasing their share to 42% from 18%, while the proportion provided by non-residents was halved from 17% to 8%. The share supplied by other private domestic financial institutions fell slightly, to 41%.

The proportion of funds raised by domestic non-financial sectors via the various financial instruments changed sharply from the period twelve months earlier. Whereas bonds and mortgages were the preferred form of financing in the first quarter of 1980 with each accounting for about one quarter of the total, in the first three months of 1981, bank loans dominated funds raised on conventional credit markets. Similarly, equity issues increased their proportion from 9% to 14%. The use made of mortgages and bonds fell sharply, to 14% and 18%, respectively.

Factors affecting financial activity during the first quarter of 1981 included: a relatively strong increase in Canada's gross national product; reduced net savings by the corporate sectors despite a slight increase in profits[1]; a sharp deterioration in the current account of Canada's balance of international payments; a reduced deficit by the federal government; a large surplus for the provincial governments; a reduction in the money supply(M1), and high rates of interest; rising energy costs, contributing to rapidly rising consumer prices.

Economic Activity

Despite experiencing very high rates of interest and a restrictive monetary policy, Canada's Gross National Product rose 14.4% in nominal terms while, in real terms, the increase amounted to 4% (seasonally adjusted at annual rates). The relative strength in the economy was fuelled by continuing strength in gross fixed capital formation by non-financial corporations (both public and private), and rises in the level of non-farm inventories and housing starts. Offsetting these positive influences were sharp declines in the net savings by non-financial private corporations and a worsening of Canada's deficit on current account transactions with non-residents.

Housing starts averaged 191,000 (seasonally adjusted annual rate), up from 158,000 starts for the year 1980. While the improvement marked a turnaround from a four year decline in the housing market, the number of starts remained substantially below the peak year of 1976. The search for protection from the loss of value of financial assets in an inflationary period may have encouraged homebuyers to purchase, tending to exert upward pressure on house prices in some major urban centres. This shift into real assets may have been discouraged, at least in part, by the rising cost of mortgage money.

Expenditures on plant and equipment rose strongly, despite continued weakness in corporate profits. Much of the increase appeared to be fuelled by non-residential construction. Among the industries indicating strong accumulation of fixed assets were mineral fuels, paper and printing, primary metals and metal fabricating, petroleum and coal and pipelines.

Personal disposable income rose about 14.5% (seasonally adjusted annual rate). With personal expenditures rising on the same order, the personal savings rate remained unchanged at 10.3%. (This compares with a rate of 4.7% in the United States).

Interest Rates, Capital Markets and Monetary Aggregates

The first quarter of 1981 saw a slight easing of interest rates at the short end of the market, while yields on longer term instruments rose, flattening somewhat the inverse yield curve that had reappeared in the fourth quarter of 1980. The Bank Rate fell 57 basis points over the quarter, closing March at 16.69%. This decline was more a reflection of a much greater drop in yields on short-term paper in the United States than a change in direction in the Bank of Canada's restrictive monetary policy. This policy, aimed at reducing the rate of inflation, was reconfirmed in February by the announcement of a new target range for the growth of M1. The new range is between 4% and 8% based on the three months centred on September 1980; the former range had been between 5% and 9% based on the average for the second quarter of 1979.[2] The new range is slightly lower than the centre of the previous one, intended to reflect the extent to which deposits previously included in M1 had shifted to daily interest savings accounts, which are recorded in M2.

---

[1] Net savings in the Financial Flow Accounts are net of dividends and taxes.

M1 weakened in the first quarter, falling 1.3% (seasonally adjusted annual rate) but remained well within the target band, despite the relative strength of the Canadian economy and exceptional growth in bank lending. By comparison, M2 and M3 grew very strongly (10.1% and 20.8%, respectively), reflecting the higher interest yields available on instruments included in these aggregates, compared with the lower or zero interest rates available on the items included in M1.

The decline in M1, coupled with continuing growth of nominal G.N.P., resulted in a rise in the velocity of money. Defining the velocity of money to be Gross National Product divided by M1, we find that this rise is a continuation of an upward trend over the past few years. However, the growth of M2 has outstripped that of GNP, with the result that the opposite trend is produced.

The widening of the yield differential on short-term paper between Canada and the United States was very sharp. For example, the yield differential on 30-day commercial paper rose from 2 basis points at the end of 1980 to 383 basis points at the end of March 1981. A less extreme widening occurred on longer term instruments. This increased incentive for investing in Canada was reflected in the external value of the Canadian dollar, vis-à-vis its United States counterpart. The Canadian dollar rose moderately, from 83.77 cents U.S. at the end of 1980 to 84.44 cents U.S. by the end of the first quarter although it weakened to 82.69 cents U.S. in February. Higher yields in Canada prompted borrowers in this country to turn to foreign markets: of net new issues[3] placed in the first quarter, 30% was sold to non-residents, up from 15% in the last quarter of 1980. The resulting inflow of funds provided support for the Canadian currency. The alleviation of downward pressure on the dollar's external value allowed the Government of Canada to repay the U.S. $300 million balance outstanding on its line of credit with Canadian chartered banks.

The impact of the new Bank Act began to be felt during the first quarter, most notably the new requirement that foreign currency deposits booked in Canada by residents of Canada are reservable. By comparison, non-resident foreign currency deposits booked in Canada and resident deposits booked abroad are non-reservable. It would appear that there has resulted a large change in the booking of these liabilities in that non-resident branches' claims on head office rose sharply while foreign currency deposits, booked in Canada, fell by a similar amount. The size of the movements and the present data difficulties in tracing the asset holders who have booked their deposits abroad have contributed significantly to the large discrepancy in The Rest of the World Sector.

Credit Market Developments

Short-term Paper and Treasury Bills

Short-term paper outstanding rose $714 million in the first quarter, a sharp reduction from $1617 million in first quarter of 1980, but almost double net new sales in the fourth quarter of 1980.

The relative decline in the use of short-term paper over the past two quarters appears to be related to the interest rate differential between short-term paper and bank borrowing. These types of financing are close substitutes and a change in their relative prices will encourage a shift in financing vehicle. Bankers' acceptances usually cost between 100 and 200 basis points less than the prime rate, but given the stamping fee on the former, the cost to the borrower is comparable. Any movements away from the norm can be expected to produce a shift between them.

Government of Canada treasury bills outstanding continued to increase sharply, rising $1035 million in the first quarter, roughly the same as in previous quarters. Treasury bills accounted for 42% of the federal government's increase in liabilities. The increased use of treasury bills in recent years appears to be a reflection of the overall market sentiment in an inflationary period. Both borrowers and lenders wish to stay short.

Loans

Bank loans experienced their strongest quarter on record, rising $8943 million, almost a fourfold increase over the first three months of 1980. The exceptional rise was principally attributable to borrowing by three sectors, and was achieved despite the repayment of the outstanding balance of U.S. $300 million on the Government of Canada's stand-by credit for bolstering Canada's international reserve position. The main borrowers were non-residents ($712 million), federal government non-financial enterprises ($1495 million which was more than accounted for by the Canadian Wheat Board's financing of payments to farmers), and non-financial private corporations. These latter borrowed $3387 million in bank loans, with the increase being broadly based, though petroleum and coal and small corporations in the retail and service industries borrowed more than others. The high amount of borrowing by non-residents during the quarter may have reflected the lower prime rate in Canada than in the United States that persisted for most of the quarter.

---

[2] The Federal Reserve Board in the United States announced in February a new target range for the rate of growth of the money supply. Both M1A and M1B, the nearest equivalent to Canada's definition of M1, were targeted to grow between 3.0% and 5.5%.

[3] Net issues are defined as gross new bonds less retirements, excluding net sales of Canada Savings Bonds and issues to the Canada Pension Plan.

The very active bank borrowing appears surprising in view of the high cost of borrowing. However, there occurred a substantial shift in financing instrument during the first quarter, from longer term to shorter term borrowing (as indicated above) and among shorter term instruments. As a result, total credit extended has not increased significantly as a proportion of Gross National Product. Should interest rates drop, it is to be expected that there will be less use made of short-term financing, including bank loans.

In contrast to bank loans, "other loans" rose $928 million during the quarter, little more than half the increase in the first three months of 1980. While trust companies were lending substantially more, Canadian subsidiaries of foreign banks (included in Sector VIII.7: "Other financial institutions: Other: Not elsewhere included") registered a much weaker quarter in their loan portfolios. In addition, the federal government forgave loans to the governments of the Yukon and North West Territories which was financed by a notional capital transfer, recorded in Category 1800 ("Net Purchases of Existing and Intangible Assets").

Bonds

With high and rising inflation, coupled with record high yields on bonds, the bond market was placed under considerable strain. Yields on long-term Government of Canada bonds rose to an unprecedented 13.48% by the end of the quarter, with shorter dated issues and those with lower credit worthiness carrying even higher yields. That the total net new marketable issues amounted to $5501 million was largely attributable to the need to finance the federal government's deficit; the federal government's marketable bond liability rose by $2576 million. This increase represented almost 50% of all such issues in the quarter. In order to assist sales, 58% of the federal government's gross new issues carried extendible features, at the purchaser's option, while fully two thirds had original terms to maturity of five years or less. Moreover, the Bank of Canada bought large amounts of longer dated bonds.

The federal government's need for cash was exacerbated during the first quarter by the large scale encashment of Canada Savings Bonds. In order to stem this flow, an increase in the interest rate was announced in March, raising the rate from 11.50% to 13.75% for the period to October 31, 1981. Even so, rates of interest payable on comparable instruments continued to appear more attractive, with the result that the federal government paid out $1789 million during the quarter. This continuing reduction in the level of Canada Savings Bonds outstanding meant that by the end of March 1981 these instruments accounted for only 17% of the federal government's liabilities, down from 24% just 15 months earlier. This policy was in line with the federal government's willingness to limit its exposure to this highly liquid liability.

Other aspects of the bond market in the first quarter included: the sale of foreign currency debentures by a chartered bank, permitted for the first time under the new Bank Act; the retirement of a Canadian National Railway bond, which had been guaranteed by the federal government at the time of issue, and which is recorded as a federal government bond (Category 3421); increased purchases by non-residents, reflecting the interest rate differential which favoured borrowing abroad by residents of Canada.

Mortgages

Despite an improvement in the number of housing starts on a seasonally adjusted basis, the actual increase was very small, rising from 27,100 in the first quarter of 1980 to 28,400 in the first three months of 1981. Coupled with exceptionally high mortgage rates, in the range of 15-15.75% throughout the quarter, mortgage activity declined sharply. Net new mortgages amounted to $2483 million, the lowest quarterly flow since 1975. Non-residential construction by non-financial private corporations was the only apparently bright aspect to the mortgage market, with this sector raising $748 million, almost double the net flow in the same period in 1980.

Most of the funds were provided by mortgage loan companies (Sector VI.2.4) which increased their lending by $1468 million, compared with $120 million in the first quarter of 1980. However, much of the change is attributable to switching in booking, with the chartered banks transferring substantial mortgage business to their mortgage subsidiaries. As a result, the banks' mortgage portfolio fell $1026 million.

Stocks

Stock markets in Canada and the United States remained relatively firm. Losses in January and February were more than recouped in March. The Toronto Stock Exchange Composite 300 Index closed the quarter at 2331.08, up from 2268.70 at the end of 1980 and the Standard and Poor's Composite 500 Index reached 136.00.

The strength of Canadian equities was surprising, in view of the high yields available on debt instruments. However, with bond holders continuing to see an erosion of their capital, investors may have been more confident that stocks would provide better protection during an inflationary period. Of the more heavily weighted industry groups, the index for paper and forest products rose 25%, while industrial products, transportation and merchandising all rose about 10%.

The brighter picture for equities encouraged corporations to place new issues in record amounts, with $3462 million in net new sales in the first quarter, an increase of almost 150% from the same period the year earlier. Non-financial private corporations were the most active, raising $2559 million, including a record equity financing with the creation of Dome Canada Ltd.

The chartered banks were also very active, selling $579 million in new stock issues, principally convertible preferred shares. Mutual funds experienced a very strong quarter with $226 million in net sales. While trusteed pension plans were active in acquiring stocks ($809 million), non-residents continued to be disenchanted with Canadian equities, making net sales of $403 million. The National Energy Program and the lack of an oil pricing agreement between the federal government and the producing provinces may have been factors affecting this outflow.

Consumer Credit

Consumer credit grew some $1228 million in the first quarter of 1981, a sharp increase from the rise of $811 million in the first quarter of 1980. A major element in this change was the sharp rise in policy loans by life insurance companies. Policy holders appear to be taking advantage of clauses in their policies permitting borrowing against the cash surrender value at very low rates of interest. ■

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiancés and fiancées are included with spouses.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Real Domestic Product by Industry of Origin, Quarterly
27 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

Year and quarter	Wages, salaries, and supplementary labour income	Military pay and allowances	Corporation profits before taxes[1]	Deduct dividends paid to non-residents[2]	Interest & misc investment income[3]	Accr'd net income of farm operators from farm prod.[4]	Net income of non-farm un-incorp. business incl rent[5]	Inventory valuation adjust.[6]	Net national income at factor cost	Indirect taxes less subsidies	Capital consump. allowances & misc. val. adj. [1] Excludes profits (net of losses) of government business enterprises [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government [4] Includes value of physical change in farm inventories The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1 1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] This item differs from col. 6, Table 1.1 by excluding the adjustment which has been made to take account of the accrued earnings arising out of the operations of the Canadian Wheat Board and the Canadian Co-Operative Wheat Producers. [2] Includes all interest on the public debt paid by government to persons. [3] Charitable contributions and bad debts.

For source see Table 1.9.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

Year and quarter	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error In general, the smaller the estimate, the larger is the relative sampling error For other explanatory material see notes at the end of Catalogue No 71-001

Source: The Labour Force (71-001), monthly.

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

[1] These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1974. [2] With the introduction of 1974 weighting pattern in October 1978, city indexes were revised from January 1971 onwards. The revision was largely the result of making the procedures used in the compilation of city indexes conform to those of the Canada indexes.

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

Data compiled according to the Steel Distribution Index revised January, 1964 [2]Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming dustries of castings, forgings and steel pipe are not included. [3]Excluding shipments for re-processing at maker's own plant. [4]Data compiled as submitted by the steel producers according to he steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used [3] Includes stove oil, kerosene [4] Includes aviation gasoline and aviation turbo fuel [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

---

[1] Price indexes of inputs measure only changes in prices of units of inputs They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown.

Note: Components may not add to totals due to rounding and partial revisions.

[1] Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2] Includes loans on the security of household property. [3] Not available on a monthly basis. [4] Includes loans to finance companies which are affiliates of retail merchandisers. [5] Religious, educational, health and welfare institutions. [6] Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies.

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

[1] Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2] Cargo includes air freight and express but excludes mail and excess baggage

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available.

---

[1] Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. [2] Total new settled-for ordinary sales in Canada. Total sales figure does not include sales for Northwest Territories. [4] Under new or amended contracts.

[2] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [3] Beginning in December 1973, this category includes oil export tax. [1] March includes supplementary payments arising from the closing of the accounts

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index— $7.

This Index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory— $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
— Director General, Content and Analysis Branch
— Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
Editor-Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Conceptual frameworks and a unified approach to Environmental Statistics

*T. Friend, Statistics Canada.

Abstract

The first part of the paper examines the need for a conceptual basis for environmental statistics. The emergence of statistical publications on the environment, the interest in the environmental dimension of the National Accounts, and the introduction of new concepts such as "carrying capacity" have focused on the need for conceptual frameworks that are general purpose and cover a wide spectrum of interests. The concept of "entropy" is suggested as a theoretical underpinning of the system. The second part reviews two prototype frameworks, one based on Material-Energy Balance Accounting, the other on a Stress-Response Approach. The third part discusses the use of the framework to initiate a dialogue with social and physical scientists, the development of environmental indicators and, for strategic planning purposes in Third World countries.

1. The Need for a Conceptual Basis for Environmental Statistics

The "environment" as a subject for statistics is relatively new, originating from the demand for numerical measures of environmental degradation in the 1960's. However, not until after the 1972 Stockholm Conference did governments take seriously the need for statistics for general assessment of the state of the environment, in contrast to more specific time/place statistics obtained from monitoring records for well defined problem areas. The first international meeting of government statisticians on the subject, convened by the United Nations Economic Commission for Europe, took place in Geneva in 1973, where it was concluded that the first step was to organise existing data into a general purpose "handbook of environmental statistics".[1] Since then there has been steady progress in organising statistical data on the environment and a variety of new publications have appeared.[2] The underlying rationale for organising data remains poorly developed. Decisions on what to include are based primarily on availability rather than on a well-designed blueprint of what would be desirable. A major weakness is the failure to portray overall environmental trends. Although these publications may disappoint those looking for significant indicators of environmental change, they have been welcomed because they provide a fresh outlook and a new synthesis of existing data. It could be argued, however, that they display an imbalanced perspective of the environment, reflecting a strong bias towards economic-geographical statistics while being weak on the ecological dimension.

Interest in environmental statistics has also been stimulated by efforts to incorporate environmental factors into economic models and the National Accounts. Here, the approach is not so much to measure the state (and change of state) of the environment but to account for the behavioural relationships between economic activity and environmental change, and make explicit the contribution of the environment to the quality of life. Despite early enthusiasm to modify the National Accounts so as to obtain more welfare oriented aggregates, it is exceedingly difficult to achieve objective estimates of environmental damage costs and benefits, the Achilles heel being the conversion of highly subjective evaluations into monetary units. A more modest approach, whereby some environmental expenditures now "hidden" in sector components (e.g. pollution abatement expenditure, environmental investment) can be made explicit, holds greater promise.

The trends towards more holistic approaches to policy

---

* T. Friend is an Advisor on Environmental Data, to the office of the Senior Advisor on Integration, Statistics Canada.
This paper was prepared for the 42nd session of the International Statistical Institute in Manila and is presented in Volume 48 of the *Bulletin* of the International Statistical Institute.

[1] Finland had already produced a prototype of such a report

[2] Representative examples are — General Environmental Statistics (Netherlands), Digest of Environmental Statistics: Environmental Protection and Conservation (U.K.), The Quality of the Environment in Japan, Indicators of Environmental Quality (U.S.), Human Activity and the Environment (Canada)

planning, evaluation and social analysis has revealed the inadequacies of the traditional subject matter categories of statistics. From an environmental perspective all statistics that describe human activity in a spatial context, that relate to the use of materials and energy, that provide indicators on the quality-of-life, both "objective" (health, housing, nutrition) and "subjective" (perceptions, attitudes, "trade-off values") are an integral part of understanding the relationship of man and his environment.

The functional role of environment statistics is, on one hand, to assess the state of the environment, and on the other, to provide the data for estimating the critical parameters of the limits of natural resources and the carrying capacity of nature. In effect, the statistics must possess the properties of valid descriptors of state, change and structure. The last, of course, are derived from observations of state and change, and provide the basis for integration and forecasting.

The task ahead is therefore to examine from an environmental standpoint the applicability of concepts and models which cut across the field of social, economic and demographic statistics and integrates these with a large (and growing) body of bio-physical data. The following section will consider the concept of entropy to provide a general theoretical underpinning for relating human activity with environmental change.

The concept of "entropy"[3]

The concept of "entropy" in sense defines the universal condition of environmental degradation and can be expressed as a continuous process of transformation of matter (and energy) from order into disorder. Economic activity can be generalised as a local reversal of the entropic process, albeit at the cost of accelerating the rate of growth of entropy in the universe as a whole — manifested, for example, by the generation of waste residuals, environmental deterioration, and the run-down of the stock of low entropy, i.e. natural resources. In the long run even "economic processes" cannot escape the entropic law and it is just as valid to conclude that economic activity is the physical transformation of low into high entropic materials (i.e. into wastes).

The production-consumption dichotomy can be clearly distinguished by utilising the concept of entropy where the latter can be viewed as the transformation process of matter (and energy) from higher to lower forms of organisation and the former just the inverse, i.e. the organisation of matter and energy into a higher form. Other examples of entropic definitions are as follows:

> *primary production* is the "extraction process" of obtaining raw materials from the "stock" (non-renewable resources), and from the "flow" (renewable resources), of low entropy; *secondary production* is the physio-chemical processes which transform "raw materials" into "economic" commodities; *intermediate consumption* is the through-put of matter and energy required as agents of the production process; *final consumption* is the throughput of matter and energy required for the "enjoyment of life"; *accumulation of man-made stock* is the process by which man creates a stock of low entropy; *renewable resources* are the flow of low entropy created by the continuous production process of nature, i.e. action of solar radiation, photosynthesis, or geo-physical forces; *waste residuals* are the high entropy by-products of production-consumption processes.

Although it would be quite consistent to describe all aspects of human activity in purely physical terms, it would undoubtedly have limited usefulness in analysing their ends and means. It is especially critical to recognise the purpose of economic activity if one wants to make statements of efficiency and performance. For example, distinction between "intermediate" and "final" consumption is of importance, since we may safely assume that the purpose of production is to do with "enjoyment" of final goods. There is, however, no equivalent physical expression that can differentiate intermediate from final consumption, and ultimately one must resort to societal-psychological parameters to provide criteria for distinguishing the "means" from the "ends".

New methods of measuring final output, productivity, and efficiency can be developed from entropy-environmental concepts. For example, an efficiency objective of economic activity could be to obtain final consumption at the least cost of entropy. Thus, the ratio of materials-energy throughputs to final consumption could be viewed as a measure of productivity.

Third World Countries

In principle concepts for organising environmental statistics should have general applicability to all countries. Nevertheless Third World countries need to consider statistical development in context of restrictions imposed by the weakness of their existing data base and the limited resources available for their further expansion. The fundamental nature of the relationship of natural resources and economic development may, however, turn a disadvantage into an advantage. Quite clearly one of the major objectives of statistical work is to provide a sufficient data base for strategic planning purposes, and since these plans depend upon an adequate knowledge of the availability and access to natural resources, it follows that high priority should be given to the development of a natural resource data base.

It may be suggested that Third World countries consider the potential of developing data not only on natural resources but their social, demographic, and economic statistics in context of environmental paradigm. The organisation of socio-economic statistics along coherent environmental regions is an obvious example, moreover the environmental dimension can be built into new statistical surveys of institutions, enterprises and households. Surveys of agricultural practices is clearly of environmental importance and similarly data interpreted from remote sensing may provide an invaluable source for statistical records of land use change.

---

[3] An analysis of the application of the concept of entropy in the social sciences is described in Georgescu-Roegen's "The Entropy Law and the Economic Process". The author introduces the concept of entropy as follows:

> "The common fact that heat always flows by itself from the hotter to the colder body, never in reverse, came to be generalised by the Entropy Law . . . All it says is that entropy of the universe (or of an isolated structure) increases constantly . . . We may say instead that in the universe there is a continuous and irrevocable qualitative degradation of free energy into bound energy."

2. Conceptual Frameworks of Organising Statistics on the Environment

The theme of this section is to illustrate the potential of utilising a framework approach to:

(i) provide a consistent structural frame for a broad general purpose data base on "human activity" and "environmental transformation";

(ii) integrate social, economic and demographic statistics with a large (and growing) body of physical measures of the state of the natural environment;

(iii) formulate guidelines for long-term development of a coherent body of environmental statistics in context of socio-economic activity;

(iv) elucidate the nature of environmental statistics ranging from formal accounting structures of human activity to complex indicators of ecosystem transformation.

In practice there has always been some kind of structure, a "hidden model" if you like, in the process of selection and organization of statistics. Indeed pragmatism, and its flexibility to respond to the changing nature of concerns could be an argument in favour of the "hidden model". On the other hand, the ad-hoc approach is generally unsatisfactory for long-term planning of a consistent data base. One may add that it may be also inefficient due to the high probability of duplicated efforts on one side and failure to identify data gaps on the other.

The two frameworks outlined below are presented as prototype models reflecting radically different but complementary structures for organising environmental statistics. One is a formal accounting structure based upon material-energy balances, whereas the second is the organisation of selected time series which depict the "transformation of the environment" in context of "events" taking place within a "real" time-space frame. The latter is known as the Stress-Response Environmental Statistical System (STRESS), where as the former is referred to as the Material-Energy Balance Statistical System (MEBSS).

These two approaches are not substitutes but different facets of a more total framework. The central objective of MEBSS is to generalise the "structure" of transformation of environmental resources into economic commodities within the restraints imposed by the law of conservation of matter and energy. In practice this requires the development of accounting principles which define the sectoral components in terms of transformation processes, and specify equilibrium behavior of material-energy flows.

Material — Energy Balance Accounts

The emergence of scarcity of natural resources has renewed interest in the development of statistics which describe the use of energy and the transformation of materials into economic commodities. MEBSS provides a comprehensive framework for data which depict material flows and energy throughputs in context of the three major policy objectives (i) the management of natural resources, (ii) the efficiency of material and energy use, (iii) the control of waste residual generation i.e. pollution loading. The underpinning of the framework is the concept of mass balance (i.e. laws of conservation of matter and energy) and the related physical transformation processes. The structure can be described as an analogues to the familiar I/O accounts where the sectors however are defined by process vectors (eg. mechanical wood pulping) rather than industrial sectors (eg. pulp and paper industry). Moreover because the data is kept in physical units it is possible to track the relationship between economic commodities, waste residuals, and raw materials. The model properties of the two systems are similar, but due to the lack of a common denominator i.e. money values, a general inverse cannot be obtained, nevertheless the multiplier effect (direct & indirect demand) can be calculated. Apart from the model properties, the system provides a formal accounting framework for organizing natural resource and environmental statistics in context of economic processes. It is this aspect which will be reviewed here.

Figure 1 is illustrative of the conceptual arrangement for a comprehensive set of accounts on the environment. The boxes depict accounts of stock and/or flow phenomena whereas the circles represent "net output" of processes. It should be noted that each module is a substantial accounting frame and can stand independently from the rest of the system.[4]

What has been illustrated is a closed system made up of two basic stock accounts, i.e. stock of low entropy (natural resources), and man-made accumulated stock (machinery and physical infrastructure); and three flow accounts, i.e. energy conversion processes, material transformation processes (production), material transformation processes (final consumption). The latter two processes are based upon National Accounts analogy, rather than a "real world" distinction. Excluded from the diagram are other possibilities such as recycling accounts or material-energy balances with the rest-of-the-world.

---

State of the Environment

MEBSS therefore is an integrated economic cum resource accounting framework where human activity is reduced to material and energy input vectors representing physical transformation processes. From another point of view the system can be envisaged as an analogue to the National Accounts minus the institutional-monetary overlay.

The practical statistical work requires the compilation of a set of stock-flow accounts where the level of activity (processes) are dependent on the available stock of low entropy. The core tables are those that depict material-energy inputs in transformation processes. These would include (i) processes of extraction of materials and energy from nature's stock of low entropy (primary production and energy conversion processes), (ii) the transformation of materials into economic commodities (secondary production), (iii) the material-energy inputs in the processes of non-tangible products, such as transportation, business and consumer services (tertiary production), (iv) the material-energy inputs of (final) consumption processes, and finally (v) a set of accounts describing the resulting waste residuals generated by the above activities (material and thermal waste returned to the environment).

The development of a taxonomy of processes is a crucial precursor of material-energy balance accounts. The Standard Industrial Classification (SIC) parallels in many respects the taxonomies of processes, in particular where there is a one to one correspondence between the industrial process and the commodity output. On the whole, however, one would expect a substantial modification and extension of the SIC if it is to be adapted for material-energy accounting. These would include identification of different processes to produce the same commodity, the same process producing different commodities, the forward extension of processes into the field of consumption activity, e.g. production of household meals, and backward extension into natural conversion processes (natural cycles). In principle, concepts of processes permit a more integrated perspective of human activity, not only because it merges man-controlled with natural processes but also integrates production with consumption processes.

Low Entropy Stock Accounts

These accounts focus on the measurement of natural (and man-made) stocks of low entropy. Stock and flow are essentially time relative concepts and there are no inherent properties that can distinguish them outside the conventions employed in the accounting frame. However in a broad sense stock can be recognised as a "store of natural resources" in which the absolute amount may never be precisely measured but for practical purposes it may be sufficient merely to keep track of additions to, subtraction from, and steady state conditions of them. These accounts can be broadly divided into non-renewable resources (where additions to is new knowledge rather than real accumulation) and renewable resources. The latter type of accounts are from a methodological standpoint particularly difficult. This stems from the wide range of qualitative properties of renewable resources and quite different measures will of course be obtained dependent on which properties one chooses to emphasize and equally which one chooses to suppress. Forest inventories, for example, have been measured by "cubic meters of the merchantable timber" — this approach would however be anathema to an ecologist.

Interest in the area is growing and recent initiatives in ecological mapping, land use surveys and wildlife inventories, as well as the potential of remote sensing techniques, bodes well for rapid development in this complex domain.

High Entropy Accounts (Environmental Quality)

This mirror image of the low entropy stock could presumably be defined and possibly classified by levels of degradation along the lines of "pollution loads" in water bodies, areas of deforestation, or soil erosion. However, the mere classification of areas and levels of environmental degradation does not satisfy the stringent equilibrium relationships defined in the material-energy balance framework. Here we must move onto more complex concepts that can deal with human activity and natural cycles of renewable resources (e.g. oxygen cycles), rates of regeneration (e.g. sustainable yields in forestry), carrying capacity (e.g. population — technology loads on the natural environment), and human pressures on ecosystem (e.g. measures of resilience, stability and recoverability of natural systems).

Quite clearly high entropy stock accounts are in a sense the qualitative dimension of the low entropy stocks and are the measure of their degradation (decumulation).

Dialectical Model: Stress-Response System

This approach emphasises historical trends where the dynamic forces are modelled on dialectical processes as opposed, for example, to those of equilibrium. The critical parameters of the system are statistical measures of environmental stress resulting from human activity, their synogestic relationship with nature (e.g. combination of human activity and background environmental factors such as climate), and the complementary statistical measures of environmental response derived from observations (e.g. monitoring records) of environmental change. And, since environmental responses in turn stress human activity, conditions for dialectical processes are inherent in the continuous adjustments and adaptation of man to his environment and vice versa.

Although at conceptual level the framework attempts to provide a coherent picture of real world activity in practice severe constraints are imposed by the nature and limitations of statistical data. In the first place, scientific knowledge of environmental change, in particular in the sensitive area of ecological transformations, is insufficiently developed to identify with any degree of certainty, stochastic relationships between stress and response. Nevertheless, considering that decisions are made daily on assumed cause and effect relationships, it would seem reasonable to organise the data from which these decisions are based on a more coherent fashion, even if this implies something of a "chicken and egg" argument.

Figure 2 depicts the essential components (or modules) in tabular form. The first column portrays a set of major activities that can be said to accelerate the rate of entropy in the biosphere, or put in another way, these are "entropic processes" which are of particular significance for monitoring environmental change. Evidently any number of processes of this type can be identified, such as urbanisation, industrialisation or tourism, and the set listed is merely illustrative of the approach.

The next three columns depict the set of statistics which are "associated" with stress-response concepts. The fourth column, "Collective and Individual Response", takes in statistics that are associated with government policy actions, enterprise and individual behaviour. Data on attitudinal surveys may be included here. The last column, "Inventory of Stock", are the complement to the activity statistics (i.e. flow variables).

Both the activity and inventory are background data and are in a sense the independent variables of the system of which response indicators can be considered as derivatives. Activity Statistics are characteristically macro-data obtained from industry, household surveys, population censuses, land use mapping, meteorological records and various estimates of resource use and depletion.

Stress indicators describe the stress dimension of the Activity Accounts. Stress can be defined as the elements that place pressure on, and contribute to the breakdown of, the natural and man-made environment. These indicators would be constructed from monitoring records (e.g. emissions), special surveys on stress factors (e.g. solid waste disposal), administrative records (e.g. registry of accidental spillage of hazardous substances). Response Indicators describe the observed effects of "stress" upon natural (and man-made) environments and perform the function of indicators of the state of the environment. These can be further distinguished between direct response which measures the condition of environmental media (habitat) and indirect response which measure the condition of living species — including the health of man. The statistics are obtained directly from monitoring records of water and air quality, surveys of soil quality, wildlife species or human health records.

Collective and Individual Responses can be described as man's reaction to environmental change. These are further distinguished by actions of governments (collective) individuals as members of households, individuals as legal entities, i.e. enterprises, and group actions, i.e. public pressure groups. These statistics relate to the measurement of "actions" to improve the ambient quality of the environment, or establish preventive (or protective) measures. A large part of these statistics are expenditures of governments and industry for the purpose of pollution abatement, or conservation measures (protection of nature). However, part of the response is in the form of legislative action and statistics could be compiled on, for example, the effect of environmental restraints on economic exploitation (e.g. on balance of payments), or areas covered by protective legislation (e.g. on landscapes preservation or rehabilitation).

STRESS in Relation to Policy

Environmental policy acts upon human actions rather than nature per se. Policy thrusts can further be characterised as those directed at (i) preventive measures, (ii) curative measures, (iii) conservation measures.

Preventive measures can be viewed as policies aimed at reducing environmental stress by modifying the behavior of production and consumption processes and in the most advantageous circumstance may stop the "process" before it arises. An example is the suppression of environmentally harmful technology or the promotion of technologies that are less stressful to the environment. Curative measures are policies that essentially regulate the "permitted" level of stress. Here we do not "prevent" stress but merely reduce it to acceptable levels. The most familiar are policies directed at pollution abatement. The third type of measure (conservation action) relate to a whole range of policies directed at the conservation and protection of environmental assets. Here we have protective legislation for land use, wildlife species, forests, or soils, on one hand, and conservation actions directed at non-renewable resources on the other. It should be observed that the statistical data on collective and individual responses to environmental degradation operate as a kind of "feedback loop", (the mechanism by which man modifies his behaviour) and can be viewed as the "synthesis" in the dialectical process. The "thesis" of course being the "stress" and the "antithesis" being the "response". See Figure 3 for a summary diagram of the relationship of policy actions and the STRESS framework.

3. The Use of Frameworks for Development of Environmental Statistics

Environmental statistics share with agriculture the distinction of spanning the social, economic and natural activity. The limited experience in integration of social and physical data calls for an interdisciplinary effort. The desirability of structural frameworks lies not only in their functional role as blueprints for integrated and co-ordinated development of environmental statistics but also as a catalyst to initiate a dialogue between social and physical scientists.

Environmental factors do not appear to have the same "weight" as economic and social variables in the decision-making process. This stems partly from the influence of national aggregates, particularly in the economic field, which are readily understood and acted

Figure 2 Structural Framework for the Stress-Responses Environmental Statistical System (STRESS)

Activity Category	Activity Statistics	Stress Indicators	Response Indicators	Collective and individual response	Inventory of Stock
I Generation of Waste Residuals	Production and consumption of economic commodities	Pollution loadings in environmental media	Pollution levels	Actions to reduce pollution loadings	Pollution abatement and recycling capacity.
II Permanent Env Restructuring	Construction Activity and Land Use Change	Location of const activity and land use change	Ecosystem Transformation	Actions to Protect and conserve environmental assets	Accumulated stock of man-made structures. Area of protected environments
III Harvesting activity	Production from renewable resources	Exploitation and technological stresses	Subtainable yields Quality of renewable resources	Actions to control technology and establish harvest quotas	Stock of renewable resource
IV Extraction of non-renewable resource	Rates of depletion	Rate of substitution Exploration activity	Environmental impact of substitutes and exploration	Conservation measures of non renewable resources	Stock of non-renewable resources
V Environmental Contamination	Production, disposition & disposal of potentially hazardous substances	Leakage of P H S in env Application of P H S	Level of contaminants in the env media and biota	Action to control the use of P H S	Stock of P H S
VI Energy	Production, use and distribution	Thermal loadings, noise (acoustic energy), Energy infrastructure	Impact of energy thermal pollution	Energy Conservation	Energy infrastructure and networks
VII Natural Activity	Climate, geophysical events	Floods, droughts, earthquakes, tidal waves	Change in harvest productivity, loss of productive lands	Expenditure incurred to protect against extreme "natural events"	Mapping of climates and bio-physical regions
VIII Population	Population change on temporal and spatial plane	Population in relation to carrying capacity	Disease and diminution of quality-of-life	Control of population growth and habitat	Census of populations

upon at the political level of decision-making. Environmental data on the other hand is unfamiliar, specific to "problem areas" and difficult to interpret. The framework approach provides a context upon which environmental statistics can be associated with the more familiar socio-economic data.

One of the major issues is the establishment of appropriate spatial units for environmental statistics. These need to accommodate the different spatial concepts of the scientist and the administrator. An ideal objective is to define the spatial units such that there is congruency between decision-making and environmental impact space. The most straightforward is that of water-shed management where decisions on upstream activity affects the quality of life of downstream residents; a more sophisticated approach is that of ecological mapping where several environmental factors are integrated, such as climate, landform and soil.

An example of how the STRESS framework can be utilised in a socio-economic contextual framework is given in Figure 4. What this demonstrates is how statistics of one resource, in this case water, can be integrated into a complex system which views water not merely from the traditional equilibrium standpoint (i.e. supply = demand) but rather as a complex natural cycling process of precipitation, stream flow, freshwater stock (lakes) and "throughput" in entropic processes (i.e. media for energy transfer, nutrient, and waste removal).

Conceptual Frameworks and Third World Countries

The conceptual approach advocated in this paper is in many respects an information system for Third World strategic planning in context of resource availability and limitation. The MEBSS framework is a more structured approach providing a model of material and energy which can be checked against the consistency of plan projections. However, its model features also imply a relatively sophisticated data base. STRESS on the other hand focusses on monitoring of trends and can be constructed more piecemeal. The advantage is that it provides an organisational framework for a large body of natural resource data currently being collected and compiled in Third World countries. It should be pointed out that the choice is not necessarily an either or proposition. The same data, concepts and classifications are required for both systems. Where they differ is in the way the data is treated in the process of organising them into the respective structural framework. The MEBSS approach clearly has advantages in the formulation of plans whereas STRESS on evaluating their impact.

Conclusions

The efficacy of concepts and structured frameworks lies, in the final analysis, on the degree they mirror the social paradigms of the age. The idea of "entropy" has been singled out because it links "natural" and "man-controlled" processes within a common definition, and moreover may establish a theoretical basis for environmental statistics. In any case it seems fruitful to further examine the application of this concept to describe, inter alia, economic activity from an environmental standpoint. The two proto-type frameworks describe a structured approach for a comprehensive but general data base of man's activity and the environment. MEBSS focusses on the relationship of the transformation of resources into economic commodities and is therefore firmly tied to economic analysis. Moreover its formal accounting methodology links the system with those of National Accounts. This approach is weak for compilation of data on environmental transformation. Here the STRESS approach seems more appropriate. The social paradigm suggests that it is not sufficient merely to keep records of "change" but also the "activities" that are "responsible" for them. Finally in the pursuit of constructing general frameworks designed to cover the wide spectrum of human activity and environmental change, one may also have uncovered a prototype structure for a general information system for strategic planning in Third World countries. This is perhaps not as fortuitous as it may seem, since in these countries environment and human activity are more closely entwined than those of industrialised countries.

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1 1

---

he implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not itable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted omponents of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the oblem of shifting weights and may be used as a measure of price change.

---

ncludes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so r as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The arterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment ves rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter omparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may e used as indicators of price change

or source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001

Source: The Labour Force (71-001), monthly.

Table 4: Selected series* by sex and main age group (thousands of persons)

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission

---

tatistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers irectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups m January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a rk-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, ance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the al. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

urce: Research Bulletin, Labour Canada.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service

he data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area tail and more explanatory notes are given in the source publication named below. [2]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and scellaneous manufacturing industries are included in non-durable manufacturing.

ese weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 74. [2] With the introduction of 1974 weighting pattern in October 1978, city indexes were revised from January 1971 onwards. The revision was largely the result of making the procedures ed in the compilation of city indexes conform to those of the Canada indexes.

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included

Note: All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Inventories owned							Inventories held: raw materials						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export based industries	Supplementary classification automotive products

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

---

ta compiled according to the Steel Distribution Index revised January, 1964. [2]Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming istries of castings, forgings and steel pipe are not included. [3]Excluding shipments for re-processing at maker's own plant. [4]Data compiled as submitted by the steel producers according to steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products.

[1] In 1979, approximately 2,000 municipalities are being surveyed

[2] This is an historical series with data available back to 1920. Consistent coverage and volume have been maintained so historical comparisons are possible

---

dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside These data are the result of a on-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along certain other areas of high building activity, are enumerated completely each month The remainder of the country is covered on a sample basis quarterly.

rce: Housing Starts and Completions (64-002), Statistics Canada.

ote: Components may not add to totals due to rounding differences.

Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2]Agency loans (loans made by other lending institutions on behalf of M.H.C.) are included under C.M.H.C. [3]Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4]Includes new and existing commercial ructures and farm property

ource: Canadian Housing Statistics, Central Mortgage and Housing Corporation.

[1]Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2]1977 and 1978 price indexes are subject to revision. [3]1978 price indexes are subject to revision. [4]Farm share only of motor vehicles. [5]The major groups include additional components than the selected ones shown

)olumn numbers refer to Tables 3 and 4, Section 11

[2] Includes special transaction-trade, not shown separately.

[3] The annual index, being calculated separately, will differ slightly from the dex obtained by the average of the twelve months.

[4] Revisions made to ensure consistent coverage The most important are: Farm machinery (73) now includes tractors; Drilling, excavating nd mining (68-72) now exclude metalworking, woodworking machinery, etc.

ource: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

olumn numbers refer to Tables 3 and 4, Section 11. [2]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3]Includes ecial transaction-trade, not shown separately. [4]Includes scrap. [5]Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions ere: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude ecial industry machinery

urce: Imports by Commodities (65-007), Summary of External Trade (65-001).

---

ginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, lair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air ers. [2] Cargo includes air freight and express but excludes mail and excess baggage.

rces: Air Carrier Operations in Canada (51-002), Statistics Canada, Air Carrier Financial Statements (51-206), Statistics Canada, Aviation Statistics Centre Service Bulletin 004), Statistics Canada.

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available.

---

his statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer ıd employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to her governments. [3]Beginning in December 1973, this category includes oil export tax. [1]March includes supplementary payments arising from the closing of the accounts.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7.

This Index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:
G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
— Director General, Content and Analysis Branch
— Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
Editor-Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Financial Activity in Canada

An Overview

During the second quarter of 1981, domestic non-financial sectors of the Canadian economy raised $22,571 million on conventional credit markets, (securities plus consumer credit and loans) compared with $17,375 million in the same period of 1980. This represented 28.5% of the value of final goods and services produced in the period, up from 24.7% in the second quarter of 1980.

Non-financial private corporations raised almost half these funds, compared with about one third in the second quarter the year before. The proportion raised by general government fell from 19% to 8%. The major supplier of funds to conventional credit markets remained the chartered banks, which accounted for almost half of the funds raised by all sectors on conventional credit markets, up ten percentage points from the equivalent period in 1980. Other private domestic financial institutions supplied a quarter of these moneys, down from almost one third in the second quarter the year earlier.

The use of bank loans continued to dominate the various financing instruments used by the non-financial domestic sectors of the Canadian economy on these conventional credit markets, rising to 45% from 35% in the period twelve months earlier. On the other hand, the use of bonds and stocks weakened, falling to 4% and 7%, respectively, from 17% and 13%.

Major factors affecting financial activity in the second quarter of 1980 included: a number of very large takeovers, particularly in the petroleum industry, which were principally financied by bank loans; rapidly rising interest rates to record levels, coupled with a fall in M1; a strong increase in Gross National Product; continuing strength in gross fixed capital formation by non-financial private corporations, which, because of somewhat reduced sector saving, required a substantial increase in net borrowing; an increase in the number of housing starts; a substantial gain in expenditure on consumer durables, producing the strongest quarter for consumer credit in two years; a record deficit on Canada's current account of the balance of international payments; and a drop in Government of Canada's net financing requirement.

Economic Activity

The Canadian economy showed remarkable resilience in the second quarter, in the face of the continuing policy of monetary restrictiveness and rapidly rising interest rates. Canada's Gross National Product rose 14.0% in nominal terms, while, in volume, the increase amounted to 4.7%, over the second quarter of 1980. However, the indications were that most of the increase occurred in the earlier part of the quarter and that the very high interest rates were beginning to have an effect by the end of the period.

The economy's performance was fuelled by the very high level of gross fixed capital formation of non-financial private corporations. Much of the increase was concentrated in the metal mines, petroleum, paper, transportation related, communications, chemical and pipeline industries. The strength of gross fixed capital formation occurred at a time of weakening savings by non-financial private corporations with the result that internal sources of funds accounted for 63% of the sector's non-financial capital accumulation, down from 79% in the same period of 1980.

Personal expenditures experienced a strong quarter, up 15.1% in nominal terms and 3.4% in real terms, from the second quarter of 1980. With personal disposable income rising more slowly, the personal savings rate slipped to 9.6% from 10.4% twelve months earlier. Personal expenditures on consumer durables provided strength: exemptions from the Ontario sales tax until the end of June may have advanced purchases on furniture and appliances, more than offsetting the weakness in automobile sales, where inventory accumulation continued.

Housing starts performed well during the quarter (especially in Alberta and British Columbia) averaging 224,000, substantially higher than the figure of 148,000 (seasonally adjusted at annual rates) in the second quarter of 1980.

The main negative factors in the economy's performance in the second quarter were a severe deterioration in the current account deficit of Canada's balance of international payments, mainly a result of a decline in the terms of trade, and the continuing weakness in corporate profits.

Interest Rates, Capital Markets and Monetary Aggregates

The second quarter was characterised by very high interest rates, particularly at the short end of the market, producing a further accentuation of the inverse yield curve. The Bank Rate rose 248 basis points over the quarter, with most of the increase occurring in May.

The increase in interest rates in May appeared to be prompted partly by the very acute rise in rates in the United States and partly to contain too rapid a rate of growth of M1, which had exceeded the Bank's target range in April. (However, as the quarter progressed and the economy weakened, the second consideration became less important, so much so, that by the end of the quarter, M1 had dropped below the target range). With the narrowing of interest rate differentials between Canada and the United States in the earlier part of the quarter, the Canadian dollar fell to 82.6 cents (U.S.) before recovering somewhat to close the quarter at 83.2 cents (U.S.). The fall of the value of the Canadian dollar against the United States dollar[1] placed a strain on Canada's international reserves. They fell $635 million during the quarter, despite the drawing down in May of U.S. $300 million on the Government of Canada's line of credit with Canadian chartered banks. (The suddenness of the deterioration of Canada's international reserves may be indicated from the fact that the federal government had repaid the U.S. $300 million outstanding balance in April)[2].

The reduction in Canada's international reserves tended to reduce liquidity, as excess Canadian dollars were purchased by the Monetary Authorities on international exchange markets, further curtailing growth in M1. It would appear that the Bank countered these developments by buying Government of Canada Treasury bills to prevent too sharp a drop in the money supply. In June, it increased its holdings of this nstrument by $841 million. However, this process would have tended to reduce interest rates. The Bank, therefore, was confronted with the difficult task of trying to prevent too fast a drop in the external value of the Canadian dollar while endeavouring to keep the money supply within its target range, which it had fallen below n June.

The increase in interest rates in Canada was very sharp. The prime rate charged by the chartered banks rose 225 basis points to an unprecedented rate of 20%, while yields on longer term instruments rose, but by a ower order. Government of Canada longer dated bonds, for example, rose 155 basis points to close the quarter at 15.03% though yields had been higher in April. The lack of sensitivity of the longer part of the market to the rapid rise in rates in the latter part of the quarter indicated a perception by the bond market that he rises were likely to be of a transitory nature.

Despite the very high interest rates that persisted during he quarter, bank borrowing reached an all-time high, uelled by borrowings to finance some very large akeovers. Most of these takeovers were in the petroleum industry and reflected the federal government's National Energy Program designed to increase resident ownership of Canada's petroleum industry. Among the larger takeovers were: Petro Canada's acquisition of more than 50% of the shares of Petrofina Canada Inc.; Dome Petroleum Limited's acquisition of Conoco Inc.'s majority holding in Hudson Bay Oil and Gas Limited (following the former's purchase of a substantial holding in Conoco Inc., which resulted in a cash and share exchange); Sulpetro Limited's acquisition of Candel Oil Ltd.; and the purchase by Canada Development Corporation of Societé Nationale Elf-Aquitaine's majority holding in Aquitaine Company of Canada Ltd. A non-petroleum related takeover was Noranda Mines Ltd.'s acquisition of 49.8% of the outstanding shares of MacMillan Bloedel Ltd.: this transaction was financed largely by a share exchange. Many of these borrowings were in foreign currency, producing a substantial increase in the chartered banks' foreign currency assets and liabilities.

Credit Market Developments
Short-term Paper and Treasury Bills

Short-term paper outstanding rose $1,585 million in the second quarter, a sharp reversal from a net decline of $52 million the year earlier. Non-financial private corporations made $610 million in net sales, and sales finance and consumer loan companies sold $649 million net, their strongest quarter since 1978.

Short-term paper is frequently used by large corporations as a substitute for bank loans, depending on the price differential. Bank borrowing in Canadian dollars weakened in the first two months of the quarter and borrowing via Canadian dollar bankers' acceptances increased as the price moved in favour of the latter instrument. In June, the price advantage narrowed, with the result that bankers' acceptances outstanding fell sharply.

The Government of Canada had net new sales of Treasury bills of $620 million in the second quarter, a substantial drop from the net increase of $2300 million in the same period of 1980. The reduction reflected the federal government's lower borrowing requirement during the quarter: the deficit was sharply lower while the cash balances at the end of March had been very high. The main purchaser of this instrument was the Bank of Canada, which raised its holding by $1139 million. The chartered banks raised their holdings by $404 million.

Loans

Strong demand for funds despite high interest rates made lenders reluctant to lock in funds for an extended period while the possibility remained that rates could move even higher. By the same argument, borrowers remained at the short end of the market, in anticipation that financing costs would fall in fairly short order. As a result, variable rate borrowing remained the preferred form of financing in the second quarter.

Bank loans outstanding rose a record $11,584 million in the quarter, one and a half times the increase in the equivalent period in 1980. The very strong growth in the quarter at a time of very high real rates of interest was attributable partly to the strength of economic activity in the earlier part of the quarter and partly to the exceptional number of very large takeovers which were largely financed through bank borrowing. Most of the increased borrowing was by non-financial private corporations ($6447 million), federal non-financial enterprises ($1138 million) and other private financial institutions, not elsewhere included ($1214 million).

"Other loans" also experienced a strong quarter rising $2126 million, almost double the increase in the second quarter of the year before. Subsidiaries of foreign banks and sales finance and consumer loan companies both showed a strong quarter.

Bonds

The bond market in Canada suffered a further decline in the second quarter, as interest rates continued to climb and the rate of inflation showed no abatement. Yields on all types of bonds rose by a minimum of 150 basis points. Net new marketable issues amounted to $4321 million, a reduction of one fifth from the second quarter of 1980.

The Government of Canada sold $485 million in net new marketable issues, about 30% of the net sales a year earlier. (The two largest issues, with an original five year term to maturity, carried an extendible feature in order to encourage sales). Net encashments of Canada Savings Bonds continued in the quarter, amounting to $1104 million. The raising of the coupon rate by two and a half percentage points, effective from June 1st to October 31st, did not appear to slow the rate of redemption. As a result, Canada Savings Bonds outstanding amounted to $14,708 million at the end of June, representing 15.3% of the Government of Canada's total liabilities.

A rising interest rate differential on bonds between Canada and the United States encouraged borrowers to place their issues abroad to a much greater extent than had characterised recent periods. Of net new marketable issues by the provinces and their agencies, federal government enterprises and all other corporate borrowers, 55% was placed abroad, the highest percentage since 1979.

Stocks

Stock markets in North America experienced active trading but prices remained flat over the quarter. The Toronto Stock Exchange Composite 300 Index closed the quarter at 2361.13, up only 1%. Of the more heavily weighted industry sectors, oil and gas rose 16% and consumer products 10%; metals and minerals component was virtually unchanged, while financial services and management companies fell 11% and 9%, respectively. The Standard and Poor's Composite 500 Index declined slightly to end the quarter at 131.25.

The slowing of the strong price advances appeared to affect corporate decisions to go to the equity market. New stock issues amounted to $2305 million, a substantial decline from the previous quarter when strong market conditions had encouraged the placement of $3462 million. Non-financial private corporations placed $1541 million in net new sales, with most of the increase coming from metal mines, mineral fuels, printing and pipelines. The chartered banks raised $335 million, continuing to increase their share capital in order to maintain a total asset to equity ratio of about 30:1, considered necessary by the industry. During an inflationary period, with associated growth in loan demand, maintenance of an adequate stock ratio requires frequent sales of equity issues.

Non-residents' holdings of Canadian shares fell for the third successive quarter, by $335 million. The decline appeared to be related, *inter alia,* to the perceived adverse effect on non-residents of the National Energy Program which had been presented in the federal budget of October 1980. In contrast to non-residents, trusteed pension plans continued to increase their holdings of equities, up some $787 million.

Mortgages

The level of mortgages outstanding rose $2936 million in the second quarter, compared with an increase of $2456 million in the same period in 1980. The net new lending, while not high by standards of the late 1970's, appeared surprisingly strong, given the increase in mortgage rates, which rose about 280 basis points during the quarter, to reach a record 18.55%. The level of housing activity held up very well during the period, particularly in the two Westernmost provinces, though starts, particularly for multiples, peaked in April and declined somewhat in May and June. This development may become more pronounced as some of the financing may have been arranged at lower rates than those prevailing at the end of the quarter. A drop in housing activity, and hence net new mortgage borrowing, may be anticipated.

Consumer Credit

Consumer credit demonstrated substantial strength in the second quarter of 1981, rising $2093 million. The increase was substantially in accordance with the considerable growth of consumer expenditure on durables during the period, and was in line with the Financial Flow Accounts model of consumer credit. In this model, the flow of consumer credit is hypothesized to be an increasing function of the expenditure on consumer durables and a decreasing function of cost of credit (represented by the prime rate charged by the chartered banks); dummy variables are used in the specification to adjust for seasonality.

Most of the increased borrowing appeared to have occurred in the earlier months of the quarter. As the economy and consumer expenditures weakened in June in the face of the higher rates of interest consumer credit followed suit. The major suppliers of funds were the chartered banks ($1240 million). Life insurance policyholders continued to take advantage of clauses in their policies permitting borrowing at rates substantially below market, contributing $197 million to the flow of consumer credit.

The above information is drawn from Cat. 13-002. For further information call (613) 995-0851. ■

---

[1] The Canadian dollar's apparent weakness against the United States dollar was more a function of the strength of the latter. Against most major foreign currencies, the Canadian dollar appreciated e.g. against the pound sterling (by 12%), the French franc (13%), the Deutsche Mark (12%), the Swiss franc (7%) and the Japanese yen (6%). A further indication of the strength of the United States dollar was the drop in the price of gold which fell U.S. $90.75 to close the quarter at U.S. $426.00.

[2] In the second quarter, the Government of Canada negotiated a new agreement with the chartered banks, allowing for a higher ceiling of U.S. $3.5 billion on the line of credit and extending the life to June 1989

An Update on the Economic Situation of the Elderly

In the March 1981 issue of the CSR as part of an article on Private Pension Plans and Socio-economic Status we discussed the economic situation of the elderly. Since then more recent information has become available and we are reproducing here a table that contains similar data for 1979 as the original article had presented for 1976. The current table does not include data on assets and debts (except on the topic of homeownership) as no new information has become available in the meantime. The table for 1979 is arranged in the same format and presents the data for the same groups as the 1976 version in the March CSR. The table features data on the income of i) persons aged 65 and over who lived alone or in a household without any relatives present (unattached individuals) and ii) married couples where the husband was 65 years or older and who had no other relatives living with them (married couples only). As in the earlier version the data are presented separately for family units reporting receipts of private pensions and those not reporting such receipts. This note will comment on some of the changes in the income picture that have taken place since 1976 by comparing the data in this table with the information for 1976 presented in the March article (not repeated here).

Over the period 1976-1979 the average income of elderly family units has risen slightly ahead of prices. According to the Consumer Price Index prices rose by 28% over this period whereas average income of elderly family units rose by 31% as estimated by the Survey of Consumer Finances. These gains are not evenly distributed among the subgroups in the table, e.g. unattached individuals gained more than couples and those with private pensions more than those without.

Although gains in real incomes were small they reduced the incidence of low income[1] among elderly family units. In 1979 less than ⅓ of them were below the low income cut-offs compared to over 36% in 1976. Among elderly unattached individuals the incidence had fallen from approximately 55% to 50% and among couples from 21% to 15%. Looking at the alternative classification, one finds in 1979 only about 8% of elderly family units with private pensions below the low income lines compared to nearly 43% of those without private pensions.

In spite of differential income growth some of the basic differences observed in the 1976 data are just as strongly present in 1979. There is the large difference in incomes of unattached individuals and married couples where the latter are much better off relatively speaking — as evidenced by the much lower incidence of low income among married couples. The difference in the incomes of those with private pensions and those without is as strongly in evidence as before. In 1979 unattached individuals without pensions had on average only 57% of the income of those with pensions and for couples this proportion rose to 65%.

Examining the changes in the income composition of the elderly family units one general observation can be made in respect to CPP/QPP benefits. The incidence of family units reporting the receipt of such benefits has grown from 32% to 41% for unattached individuals, from 58% to 67% for married couples and from 45% to 53% for all elderly family units. With more family units reporting the receipt of CPP/QPP benefits the proportion of income from this source accounts now for over 7% of total income whereas in 1976 it was estimated to be only less than 5%. It is not unexpected that the maturing of the CPP/QPP plans is producing this effect. It should be noted that for family units who are in receipt of private pensions the possibility is much higher of receiving also CPP/QPP benefits. Nearly 77% of all elderly family units receiving private pensions also reported CPP/QPP benefits whereas for the group without private pensions the proportion reporting CPP/QPP benefits was only 42%. Again these are not surprising results as coverage by a private pension plan since 1966 has always presupposed that there is also participation in CPP/QPP.

Increases in Old Age Security and the Guaranteed Income Supplement had a dominant effect on the incomes of those without private pension benefits. For this group in 1979, OAS/GIS accounted for 37% of income compared to 33% in 1976.

---

[1] See footnote (5) to table.

No major change in the importance of private pension benefits can be detected. It still accounts for about 26% of total income for the group that received such benefits and for about 10% - 11% of total income of all elderly family units. At the same time it must be remembered that i) average income of the group with pensions is much higher than that for those without, and ii) that the income for this group rose more over the 3 year period than for family units without pensions.

In 1979 investment income accounted for 21% instead of 19% of total income of all elderly family units in 1976. The share of employment income on the other hand dropped from 31% to 26%; a considerable portion of this earned income comes from the employment of younger wives who are still working.

In response to the current interest some statistics on the mortgage indebtedness of elderly homeowners have been added to the 1979 table. Like in previous years the incidence of homeownership among the elderly family unit is somewhat higher than for younger units — it is estimated to have been 61% compared to a national average of 59%. Of the 61% of elderly who lived in their own homes only 10% reported having mortgage debt. This is much lower than the national average for all homeowners and quite in line with the expectation that over their working lives most families manage to pay off their mortgage. In terms of numbers this estimate corresponds to less than 100,000 homeowners aged 65 and over still having mortgages on their homes.

In order to analyze the reasons for the income changes described above it would be necessary to disaggregate the group of elderly family units further, e.g. by age. Most likely recent retirees among the elderly have higher incomes and different income sources than the older units who retired years ago. The observations here are based on averages and should not be interpreted to mean that all elderly family units are able to maintain their levels of living in the face of difficult economic circumstances and high inflation.

For further information contact Raj Chawla, Consumer Income and Expenditure Division 996-5271. ■

Selected Statistics on the Economic Status of Elderly Unattached Individuals and Families by Pension Status[1], 1979

Observations

Metric Conversion Feature on CANSIM

A provision for entering Metric unit data into established Imperial unit series on CANSIM can now be accomplished without the need to change all historical data and without having to duplicate these series on the base. The new (AC) Add Conversion operation will enable the source to input Metric values to a series which had previously been entered as Imperial units. The Add Conversion card specifies the conversion reference date, a conversion code, metric scalar factor and number of decimals.

This feature has been designed to allow, on retrievals, a choice of specifying either Metric or Imperial unit of measure. Series which are convertible will contain a "C" n the position before the termination indicator in the Series Directory.

For further details please contact CANSIM Division.

Developments in CANSIM

CANSIM staff have recently completed the conversion of the Time-Series data base and software to a new ormat which has been under development for several years. One of the most significant aspects of the change is the integration of french language descriptors into the system to enable choice of language of display. The systems conversion will also enable entry of Metric unit data into established Imperial unit series without the need to change all historical data. Retrieval for such convertible series will be possible either in Metric or mperial units. Storage has been optimized to enable additional new data to be loaded. CANSIM staff will be developing new training material and reference documentation for data entry and retrieval. Staff are available for consultation on the extent and nature of changes.

Details of the changes will be described in future issues of the Canadian Statistical Review.

Teaching Business with Statistics

ollowing recommendations by a Kingston education onsultant, Statistics Canada is preparing material to elp high school teachers become familiar with and make use of statistical data in the classroom.

four-year plan to produce such material is in reparation, and a catalogue of Statistics Canada ublications of special interest to high school teachers ill be published by mid-1982.

ndrew Billingsley, assistant director, user services vision, described Statistics Canada publications that ould be useful in the classroom to participants in the ghth annual conference of the Canadian Association f Business Education Teachers, held in August in amilton. He spoke particularly about Bureau ublications that would apply in the fields of accounting, onsumer studies, marketing, economics and law.

he consultant's report, Billingsley said, called for stablishment of an advisory committee, including some educators; examination of outstanding teaching material prepared by an American retailer; and promotion of data at teachers' conferences.

The recommendations were based on a needs assessment survey of teachers in several disciplines, including school librarians. One-third of respondents indicated that they did not use Statistics Canada data, mainly because they did not know what relevant material was available. In addition, some found that available material is difficult to use, that assignments do not require intensive use of statistics, and that the cost is too high.

Analysis of Statistics Canada's sales to schools reveals that the annual cost of subscribing to the ten most used publications is now less than $100. Leading the most used list were the Canada Year Book, the Canadian Statistical Review, the Consumer Price Index, Infomat and Perspectives III.

Historical Catalogue

A new publication entitled *Historical Catalogue of Statistics Canada* Publications, 1918-1980 (cat. no. 11-512) is being produced by User Services Division.

This bibliographic guide to the publications of the Bureau will provide a record of all titles published from 1918 to 1980. It will also list publication titles for each census from 1871 to 1976 inclusive and will include a title index. The catalogue, which will be printed in separate English and French volumes, will assist librarians, statisticians, economists, social planners and others interested in retrospective data in identifying relevant sources.

The last historical catalogue was released in 1967 and contained a listing of publications from 1918 to 1960.

Effects of Revisions in Current Seasonal Adjustment Series

Estela Bee Dagum, Chief of the Seasonal Adjustment and Time Series Analysis Staff at Statistics Canada, presented her invited paper, "Revisions of Time Varying Seasonal Filters", at the INTERNATIONAL SYMPOSIUM ON FORECASTING in Quebec City in May of this year. The paper describes the study of the magnitude and the nature of the revisions that the time varying seasonal filters of the X-11 and X-11-ARIMA methods introduce in the current seasonally adjusted series. The main purpose of the study was to measure that part of the revisions due to changes in the filters applied to "current" and "historical" seasonal adjustment. The paper deals with the calculation of the X-11 seasonal filters, the total revision of the asymmetric filters, and the filter revisions of the X-11-ARIMA program. It also presents a comparison of the effects of the asymmetric filters of X-11 and X-11-ARIMA on the estimation of the trend-cycle, seasonality and irregulars.

The paper will be published in the April, 1982 issue of the International Journal of Forecasting.

Copies of the paper or information concerning the details of the study can be obtained by telephoning 995-3126 or writing to Seasonal Adjustment and Time Series Analysis Staff, Statistics Canada, 25-A, R.H. Coats Building, Ottawa, Ontario, K1A 0T6.

A Comprehensive Description of Sources and Methods for the Canadian Balance of International Payments and International Investment Position.

The Canadian Balance of International Payments and International Investment Position: a Description of Sources and Methods, E.B. Carty, Catalogue No. 67-506E, $20.00 in Canada, $24.00 elsewhere.

A new Statistics Canada study offers the first full description in several decades of the mosaic of statistical sources and techniques used to estimate Canada's international balance of payments and international investment position.

This publication describes how information is obtained from myriad sources and harmonized to reflect everchanging international economic and financial relationships.

The work also provides historical perspective on the conceptual and methodological evolution of these statistics, which date back to 1926.

Although occasional notes on specific elements of the data have been included in some balance of payments publications since 1960, the study will fulfill a need by academics and economists for a comprehensive treatment of this topic.

Besides providing an overview of the nature and evolution of balance of payments and international investment position statistics, the publication defines, describes and evaluates component series and gives information on their relationships to other parts of the System of National Accounts, to international standards and returns such as those of the International Monetary Fund (IMF) and to other published statistical series.

The volume contains 481 pages including a detailed index.

Further Information: Balance of Payments Division, R.H. Coats Bldg., 21st Floor, Ottawa K1A 0Z8. Phone: (613) 995-0743. ■

The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Beginning with 1978, his is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and onstruction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiancés and fiancées are ncluded with spouses.

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1

The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not uitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted omponents of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the roblem of shifting weights and may be used as a measure of price change.

---

ncludes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so r as their investment activities are concerned The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The uarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment ves rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories The estimates are derived from a sample survey and are subject to sampling error In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001

Source: The Labour Force (71-001), monthly.

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

---

tistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers rectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a k-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, nce, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the l. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

rce: Research Bulletin, Labour Canada.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service.

e data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area ail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and ted services, health and welfare services, religious organizations, private households and public administration and defence.

rce: Employment, Earnings and Hours (72-002), Statistics Canada.

[1] See footnote 1 and source in Table 10. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries

---

e data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area ail and more explanatory notes are given in the source publication named below. [2]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and scellaneous manufacturing industries are included in non-durable manufacturing.

---

se weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year . [2]With the introduction of 1974 weighting pattern in October 1978, city indexes were revised from January 1971 onwards. The revision was largely the result of making the procedures in the compilation of city indexes conform to those of the Canada indexes.

rce: Consumer Prices and Price Indexes (62-010), Statistics Canada.

Table 3: Construction price indexes

Year and month	Residential building construction input (1971 = 100)								Non-residential building construction inputs (1971 = 100)			Construction Union Wage (1971 = 100)

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

able 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are utually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

ote: All series are subject to revision each year when more recent Census of Manufactures data become available.

ource: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

	Inventories owned							Inventories held: raw materials						
	Consumer goods							Consumer goods						
Annual average and month	Non-durable	Durable	Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Non-durable	Durable	Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export based industries	Supplementary classification: automotive products

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

able 12: Primary iron and steel (thousand metric tonnes)

ta compiled according to the Steel Distribution Index revised January, 1964. [2]Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming istries of castings, forgings and steel pipe are not included. [3]Excluding shipments for re-processing at maker's own plant. [4]Data compiled as submitted by the steel producers according to steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric

te: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

pply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2]Includes crude oil, condensate and pentanes

s [3]Gross new production by field less field flared and waste.

Jrces: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

Table 5: Statistics of refined petroleum products (thousand cubic metres)

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used [3] Includes stove oil, kerosene [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products.

---

[1] dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a tion-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along th certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

urce: Housing Starts and Completions (64-002), Statistics Canada.

lote: Components may not add to totals due to rounding differences.

Data are on a gross basis i.e they do not take account of cancellations or alterations of loans after initial approval. [2]Agency loans (loans made by other lending institutions on behalf of .M.H.C.) are included under C.M.H.C. [3]Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4]Includes new and existing commercial tructures and farm property.

ource: Canadian Housing Statistics, Central Mortgage and Housing Corporation.

---

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown

Column numbers refer to Tables 3 and 4, Section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

olumn numbers refer to Tables 3 and 4, Section 11. [2]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3]Includes pecial transaction-trade, not shown separately. [4]Includes scrap. [5]Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions ere: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude pecial industry machinery.

ource: Imports by Commodities (65-007), Summary of External Trade (65-001).

Section 12 · Transportation

16 1. Carloadings of Revenue Freight
17 2. Operating Statistics of Canadian Railways
17 3. Operating Statistics of Air Carriers in Canada
18 4. Operating Statistics of Canadian Pipelines
18 5. Shipping Traffic

Table 1: Carloadings of revenue freight on Canadian railways[1] (thousand cars)

Year and month	Total railway revenue freight loadings (carload and non-carload) ('000 tons)		Total revenue cars loaded (carload only)	Farm products and food						Mine products

eginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, rdair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air riers. [2] Cargo includes air freight and express but excludes mail and excess baggage.

urces: Air Carrier Operations in Canada (51-002), Statistics Canada, Air Carrier Financial Statements (51-206), Statistics Canada, Aviation Statistics Centre Service Bulletin -004), Statistics Canada.

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series.

---

te: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are included in the data.

iis series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to ect what had been the previous centres; however, this comparison may not remain valid through time. [2]Seasonally adjusted data for Saskatchewan is not available.

urce: Cheques Cashed (61-001), Statistics Canada.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index— $7.

This Index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory— $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
— Director General, Content and Analysis Branch
— Director, Financial Flows and Multinational Enterprises Division
L.O Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
Editor-Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Monthly or quarterly data may not add to totals due to rounding.

Section 7, Table 7 — Non-Metallic minerals

The series "Producers Shipments of Lime" D2632 has been reinstated with this issue.

Gross Domestic Product by Industry in Constant (1971) Prices

All series in Section 3, tables 2.1 and 2.2 have been revised back to 1971. Also, all these series are available in new CANSIM matrices (1125 to 1131 inclusive). The name for the overall total has been changed from Real Domestic Product by Industry to Gross Domestic Product by Industry in constant (1971) Prices. The source publication names are Gross Domestic Product by Industry for both the annual (61-213) and the monthly (61-005).

Gross National Product

Third Quarter 1981 Advance Information

Preliminary estimates of the National Income and Expenditure Accounts indicate that Gross National Product, seasonally adjusted at annual rates, rose to $330.8 billion in the third quarter, an increase of 1.6%. In real terms, this represents a decline of 1.0% after allowing for an increase of 2.6% in overall prices. The sudden buckling of economic activity in the quarter follows three quarters of strong growth, at least by recent standards, averaging 1.6% per quarter. The decline would have been greater had there not been a substantial addition to inventories, as final demand declined much more rapidly than production. Excluding inventory investment, overall real output fell 1.9%, its most severe contraction since 1951. A continued worsening of the merchandise trade balance and an increase in interest and dividend outflows and miscellaneous income payments drove the current account balance to a new record deficit during the quarter.

The abrupt reversal so soon after the 1980 recovery would appear to be because the economy has finally given way in the face of a protracted period of high interest rates, prevalent in all major industrialized nations including Canada, since the fall of 1980. Labour disputes in a number of industries contributed in a lesser way to the weakness of the third quarter. Virtually all of the major categories of expenditure declined in real terms during the quarter. Personal expenditure fell by 0.9%. investment in machinery and equipment by 5.9%, and expenditure on residential construction by a precipitous 13.5%.

Corporation profits tumbled 15.8%, following a decline of 3.0% in the second quarter. The third quarter drop far surpassed any previous declines on record and was widespread. Labour income recorded a moderate increase of 2.4%, while personal disposable income rose 4.2%. This would imply some optimism for consumer expenditure in the fourth quarter; however, most of the strength in personal income was due to a 20.0% rise in the interest-related investment income and may reflect shifts in the composition of investment holdings or may not be readily converted into consumption in the near future. Moreover, higher energy prices have sustained inflation rates above the increase in nominal wage rates and led an upturn in domestically-produced inflation in Canada. A deterioration in the terms of trade further squeezed the purchasing power of Canadians, although the recent weakness in export prices in commodity markets has helped to slow the increase in the GNE implicit price index.

Real personal expenditure on goods and services fell 0.9% in the quarter, mostly due to lower spending on durable and semi-durable goods. The sharp decline coincided with a weakening of wages and salaries, a continuation of rising interest rates and strong price increases; it also followed the temporary suspension of sales taxes on specific items in Ontario. Spending on durable goods fell 5.7%, the largest decline since 1976. The striking reversal of purchases of non-automotive durable goods, particularly furniture and household appliances, and the accentuated weakness of demand for autos, down 6.3% in volume, were responsible for the drop. Purchases of semi-durable goods were down 1.3%, as many of the components fell despite the perceptible slowdown in prices of these goods. The 0.7% growth in spending on non-durable goods was largely concentrated in the food and energy components. Purchases of services grew only 0.3%, with lower spending on travel and related services, such as air transport and purchased accommodation.

The merchandise trade balance continued to erode in the quarter, falling about $1.7 billion at annual rates to $3.4 billion after declines of $4.6 billion and $1.5 billion in the first and second quarters. Merchandise exports declined by 4.1% in volume under the pressure of receding demand from the major industrialized nations overseas and the virtual halt of economic growth in the United States. Lower shipments abroad of crude and fabricated materials, notably lumber, pulp, iron ore, rolling mill products and wheat, reflected the broad slump of demand evident in international commodity markets this year and supply disruptions in Canada. Exports of end products remained surprisingly firm, as motor vehicle products recorded strong gains for the second consecutive quarter. The collapse of the U.S. auto market, however, and the widespread layoffs recently announced by the industry augur for a sharp retrenchment of activity in this sector in the fourth quarter. Merchandise imports fell 2.5% in volume as demand for industrial machinery and equipment was sluggish, while imports of crude oil and non-ferrous metals declined sharply.

Business residential construction slid 13.5% in real terms after three quarters of strong growth. Total work-put-in-place fell 6.3%, dominated by a sharp decline in the construction of single family homes. Construction of multiple units continued to strengthen in the quarter, as occupancy rates were at record high levels in most large urban centers in the country. Real estate commissions also fell sharply in line with the weakening of activity in this sector.

Business investment in plant and equipment fell 2.4% in volume, with all of the reversal contained in a 5.9% decline in outlays for machinery and equipment. The origins of the weakness suggest that cyclical factors, notably the constricting effects on cash flow of slack demand and the high cost of financing outstanding debt, dominated the decline compared to the strike-induced fall in the second quarter of 1980. Demand fell sharply for those components most easily adjusted in the short-run, notably transportation equipment such as vehicle sales and aircraft, although there was also a slackening of demand for imported industrial machinery and agricultural equipment. Expenditure on non-residential construction continued to expand, rising 1.5% in volume, as the long lags involved in the construction of projects such as utility and manufacturing plants and pipelines typically makes spending in this sector less sensitive to developments in current economic conditions. The pattern thus far in the year suggests that there will be some small shortfall in business investment relative to the 23.5% mid-year estimates of the Public and Private Investment Survey in Canada for 1981.

Business non-farm inventories rose for the third consecutive quarter. The sudden fall-off in final sales more than outweighed cutbacks in goods production, and the rate of stock-building accelerated sharply to $1.6 billion in volume. By the end of the quarter, firms appeared to be intensifying their efforts to shed unwanted stocks by cutting back orders, output, and employment. The step-up in inventory accumulation was evident at all levels of production and distribution in the economy. By far the most pronounced increases were in retail stocks of automotive products, but there were also significant accumulations of transportation equipment, wood and clothing at the manufacturing level, and autos, lumber and machinery and equipment within the wholesale industry.

The economy-wide measure of inflation contained in the implicit price index of GNE rose 2.6%. On a year-over-year basis, prices have risen 9.5%, down slightly from the peak rates of almost 12% prior to the 1980 recession. All of this slowing reflected slumping prices received in international markets, as prices have declined for a wide range of agricultural and crude materials. Import prices have also slowed from their rapid increases in 1980 as inflation has subsided in most major industrialized nations. The implicit price index of GNE excluding exports, a measure of domestically-produced inflation facing economic agents in Canada, rose about 3.0% for the second consecutive quarter and is now 10.7% above the level of a year-ago. Higher energy prices for consumers, up about 30% in the year, following the introduction of the National Energy Program, has led this increase.

Total government revenue, excluding intergovernmental transfers, slowed to a 3.0% increase as a result of lower corporate income tax liabilities, reflecting the weak performance of corporate profits, and lower rates of growth in revenues from indirect and personal direct taxes. Total government expenditure advanced 4.5%, due to higher outlays for goods and services, as retroactive wage payments rose substantially, and higher interest charges on the public debt. As a result, the deficit of all governments combined, on a National Accounts basis and seasonally adjusted at annual rates, rose to $2.4 billion in the third quarter from $0.3 billion in the second quarter. Most of the change took place at the provincial government level where the surplus fell sharply. The federal deficit decreased somewhat and the average to date in 1981 has been about $6.1 billion versus $10.7 billion in 1980. ■

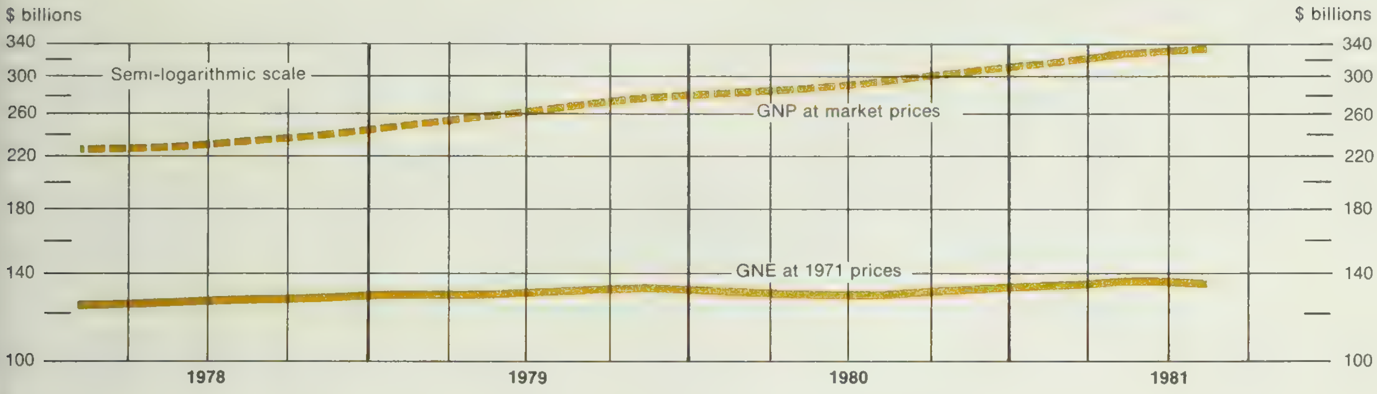
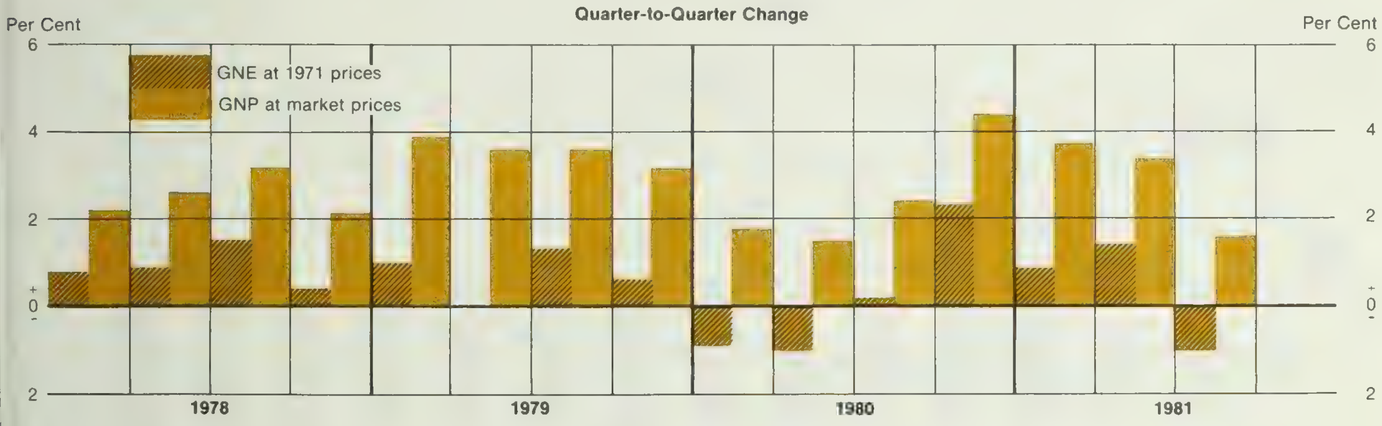
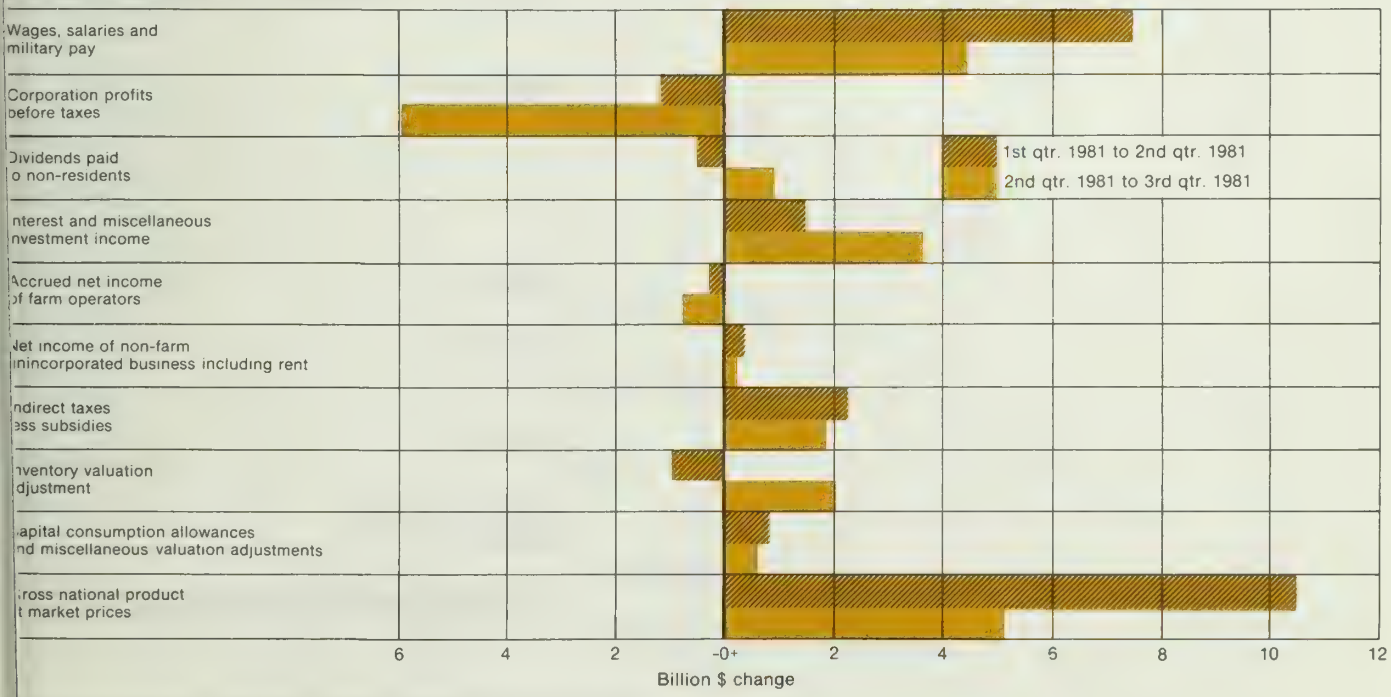
Gross National Product, seasonally adjusted at annual rates rose to $330.8 billion in the third quarter, an increase of 1.6%. In real terms G.N.P. declined 1.0%.





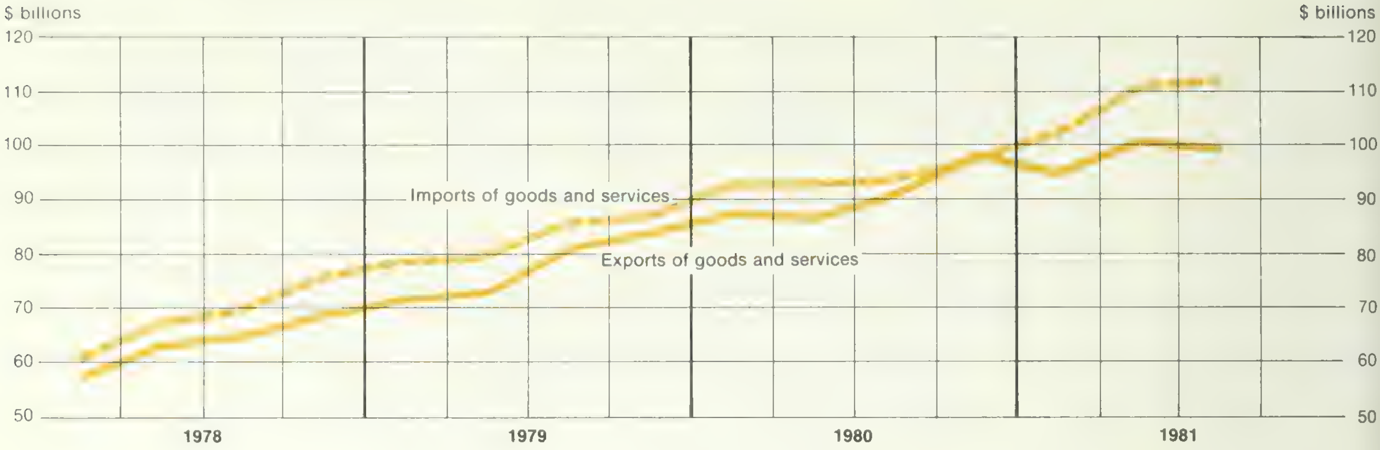
Wages, salaries and supplementary labour income and military pay recorded a moderate increase of 2.4%. Interest and miscellaneous investment income increased 14.6% while corporation profits before taxes fell to a record 15.8% following a 3% decline in the second quarter.

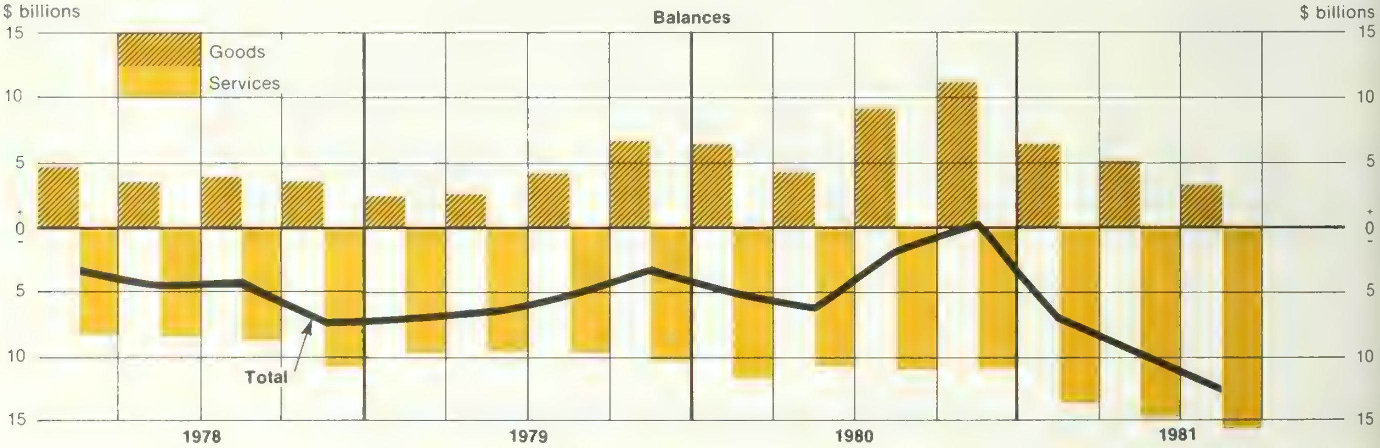
Quarterly changes in GNP and components



ote: All quarterly data adjusted for seasonal variation and at annual rates

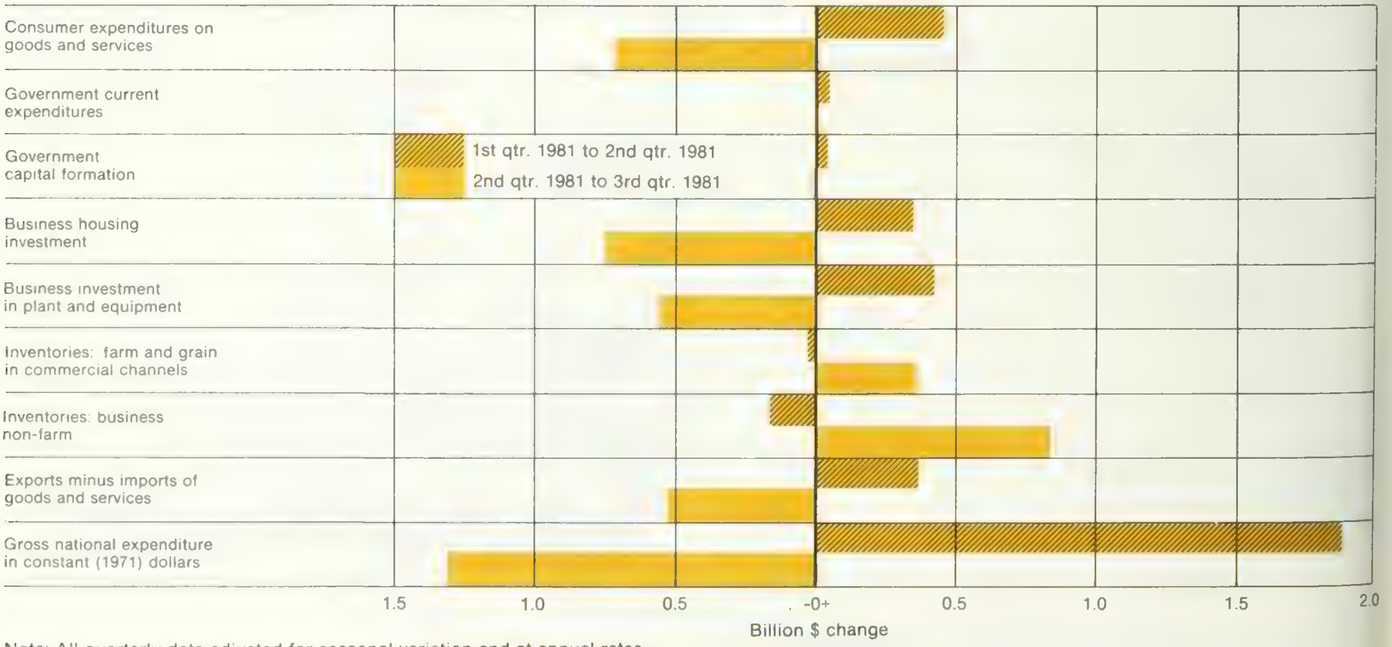
Exports of goods and services fell 1% while imports increased 1.5% reflecting a $12.4 billion deficit in the balance of trade in goods and services. The merchandise trade balance continued to worsen in the third quarter falling $1.7 billion to a level of $3.4 billion, following a $1.5 billion decline in the second quarter.





Real consumer expenditure on goods and services fell 0.9%, business housing investment and business investment in plant and equipment decreased 13.5% and 2.4% respectively and exports of goods and services declined 3.0%. Business non-farm inventories accumulated at a rate of $1.6 billion, up $840 million over the previous quarter.

Quarterly changes in GNE and components in constant (1971) dollars



Note: All quarterly data adjusted for seasonal variation and at annual rates

---

he occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. e classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2]Beginning with 1978, s is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3]Includes logging, fishing, trapping and hunting. [4]Includes mechanical and nstruction. [5]Includes a small number in non-specified occupations. [6]Beginning with 1978 includes fiancés and fiancées. [7]Does not include students entering Canada on students' visas. cludes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiancés and fiancées are luded with spouses.

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001

Source: The Labour Force (71-001), monthly.

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers ndirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2]The industry groups om January 1976 forward, are based on the 1970 Standard Industrial Classification. [3]The number of person-days is calculated by multiplying the number of workers involved in a ork-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4]The total includes all work stoppages The agriculture, nance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the tal. [5]Includes publishing and allied industries. [6]Includes storage and communication industries.

ource: Research Bulletin, Labour Canada.

Table 9: Employment indexes,[1] by industrial division (1961 = 100), based on the 1960 standard industrial classification

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service.

The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and elated services, health and welfare services, religious organizations, private households and public administration and defence.

[1] See footnote 1 and source in Table 10 [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

---

[1] These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1974. [2] With the introduction of 1974 weighting pattern in October 1978, city indexes were revised from January 1971 onwards. The revision was largely the result of making the procedures used in the compilation of city indexes conform to those of the Canada indexes.

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

---

[1] Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Inventories owned							Inventories held: raw materials						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export based industries	Supplementary classification: automotive products

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes pipe, plug, chewing, twist, snuff etc. [4] Sales to wholesalers, retailers and institutions which are subject to excise duty. [5] Includes sales for ships' air stores, embassies of Canada and for export. [6] End of period.

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Source: Housing Starts and Completions (64-002), Statistics Canada.

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2] 1977 and 1978 price indexes are subject to revision. [3] 1978 price indexes are subject to revision. [4] Farm share only of motor vehicles. [5] The major groups include additional components than the selected ones shown.

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] Includes special transaction-trade, not shown separately. [3] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4] Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

---

[1] Column numbers refer to Tables 3 and 4, Section 11. [2] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3] Includes special transaction-trade, not shown separately. [4] Includes scrap. [5] Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, ordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air arriers. [2] Cargo includes air freight and express but excludes mail and excess baggage.

ources: Air Carrier Operations in Canada (51-002), Statistics Canada, Air Carrier Financial Statements (51-206), Statistics Canada, Aviation Statistics Centre Service Bulletin 51-004), Statistics Canada.

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans [8] Loans to grain dealers and exporters. [9] Loans to finance purchase of Canada Savings Bonds at time of issue. [10] Including loans to instalment finance companies. [11] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available.

---

[2] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [3] Beginning in December 1973, this category includes oil export tax. [1] March includes supplementary payments arising from the closing of the accounts.

---

[1] Initial surgical procedure is defined as a surgical procedure or a combination of two or more surgical procedures used to terminate the pregnancy.

[2] Period of gestation was calculated as the difference between the date of pregnancy termination and the first day of the last normal menses For abortion cases with unknown first day of last normal menses, the period of gestation was estimated clinically.

[3] D & C are abbreviations for dilatation and curetage
